

Alco Controls

Components for Heat Pumps, Refrigeration and Air Conditioning

Product Selection Catalogue

Note:

The components listed in this catalogue are not released for use with caustic, poisonous or flammable substances. EMERSON™ cannot be held responsible for any damage caused by using these substances.

General Information

Technical data are correct at time of printing. Updates may occur and should you need confirmation of a specific value please contact EMERSON stating clearly the information required.

EMERSON cannot be held responsible for errors in capacities, dimensions etc., stated herein. Products, specifications and data in this literature are subject to change without notice.

The information given herein is based on data and tests which EMERSON believes to be reliable and which are in accordance with today's technical knowledge. It is intended for use by persons having the appropriate technical knowledge and skill, at their own discretion and risk. Our products are designed and adapted for fixed locations. For mobile applications failures may occur. The suitability for this has to be assured from the plant manufacturer which may include making appropriate tests.

Electrical Control Valves

Electronic Control

Electrical Control Valves

Electrical Control Valves for OEM use	EXM/EXL	7
Pulse Modulated Expansion Valves	Series EX2	8
Electrical Control Valves	Series EX4, EX5, EX6, EX7, EX8	11

Electronic Controllers and Sensors

Superheat Controllers	Series EC3-X32 / EC3-X33	36
Digital Superheat Controllers	Series EC3-D72 / EC3-D73	36
Stand Alone Driver Module	Series EXD-U	37
Display Case and Universal Controllers	Series EC2	38
Coldroom Controllers	Series EC3-300	41
Condenser- and Condensing Unit Controllers	Series EC2-500, -700	44
Rack and Condenser Controllers	Series EC3-600, -700, -800, -900	47
Network Accessories		51
Electronic Smart Starter	Series ESC	52
Pressure Transmitters	Series PT5	53
Fan Speed Controllers	Series FSU	55
Fan Speed Controllers	Series FSP	57

Conventional Control

Thermo[®]-Expansion Valves

Thermo [®] -Expansion Valves	Series TI	62
Thermo [®] -Expansion Valves	Series TX3	68
Thermo [®] -Expansion Valves	Series TX6	70
Thermo [®] -Expansion Valves	Series T	72
Thermo [®] -Expansion Valves	Series ZZ	77
Liquid Injection Valves	Series L	80
Liquid Injection Valves	Series 935	82
Flanges for Valves		86

Solenoid Valves

Coils and Cable Assemblies		89
2-Way Solenoid Valves	Series 110 RB, 200 RB, 240 RA	90
2-Way Solenoid Valves	Series 540 RA	91
3-Way Solenoid Valves	Series M36	94

Mechanical Pressure Regulators

Hot Gas Bypass Regulators	Series ACP	97
Hot Gas Bypass Regulators	Series CPHE	98
Evaporator Pressure Regulators	Series PRE	100
Crankcase Pressure Regulators	Series PRC	101

Pressure Controls and Thermostats**103**

Single Pressure Controls	Series PS1	106
Dual Pressure Controls	Series PS2	108
Pressure Controls	Series PS3 / Standard types	110
Pressure Controls	Series PS3 / Special types	112
Differential Pressure Controls	Series FD 113	113
Thermostats	Series TS1	118

System Protectors and Others**System Protectors, Moisture Indicators****119**

Bi-Flow Filter Driers	Series BFK	121
Filter Driers	Series ADK	122
Filter Driers	Series FDB	124
Filter Drier Shells	Series ADKS-Plus	126
Filter Drier Shells	Series FDH	127
Filter Drier Shells with Quick-cap	Series FDS-24	128
Suction Line Filters and Filter Driers	Series ASF and ASD	131
Suction Line Filter and Filter Drier Shells	Series BTAS	132
Moisture Liquid Indicators	Series MIA	134
Moisture Liquid Indicators	Series AMI	135

Oil Management Components**137**

Electronic Oil Level Management Systems	Series OM3 / OM4	139
Oil Separators	Series OS	141

Suction Accumulators, Ball Valves, Acid Test Kit**143**

Suction Accumulators	Series A	144
Ball Valves	Series BVE / BVS	145
Acid Test Kits	Series AOK	146

Electrical Control Valves

Electrical Control Valves

Electrical Control Valve Technology

Thermostatic expansion valves and mechanical regulator valves have been used in the refrigeration and air conditioning industry to control superheat and refrigerant mass flow since its very beginning. As today's systems require improved energy efficiency, tighter temperature control, wider range of operating conditions and incorporate new features like remote monitoring and diagnostics, the application of electronically operated valves becomes mandatory. Only they offer the controls performance necessary to meet these needs.

Electrical control valves are actuators only. For operation in a system they need sensors, valve drivers and controllers, see next chapter.

EX2 is designed for pulse width modulation. It is applicable to all common HCFC and HFC refrigerants and for subcritical CO₂ applications and is used mainly for refrigeration applications such as display cases. The EX2 valve is a slide type solenoid valve with an orifice for expansion. It is either completely open or completely closed. One common valve body can be combined with 6 interchangeable orifices to cover 7 capacity ranges.

EX4/EX5/EX6/EX7/EX8 consist of two main internal assemblies, the valve and the stepper motor. The stepper motor is located next to the electrical plug and connected directly to the slide and cage assembly of the valve. Similar to the technology used in compressors, the motor is exposed to refrigerant and lubricant and the materials used are identical

to the ones in compressor motors. The housing of the motor and valve assembly is made from stainless steel and fully hermetic, utilising exclusively brazing and welding technologies and eliminating all gaskets.

This design offers several technical advantages such as proportional linear mass flow and a wide capacity range.

A common feature of all ALCO electrical control valves is the positive shut-off function, which eliminates the need for additional solenoid valves.

Valve Selection

For **EX2** the published table quotes capacities at 100% duty cycle. i.e. valve open continuously. However, it is recommended to operate the valve at partial load (50-80%) to allow for system load fluctuations.

For **EX4/EX5/EX6/EX7/EX8** and **EXM/EXL** all published capacities are maximum and there are no reserve capacities. Each valve should be selected for the highest possible capacity of the system. A wide range regulation (10 ... 100%) with one slide orifice for each valve is achievable.

To facilitate **valve dimensioning** for other than the standard conditions ALCO offers an Excel based **Selection Tool**. This can be downloaded from www.emersonclimate.eu.

Selection Table for Electrical Control Valves and applicable Controllers

Electrical Control Valves Series EXM/EXL

for OEM use, stepper motor driven

Features

- Unipolar stepper motor
- Bi-flow (same performance in both flow directions in term of capacity and MOPD)
- High MOPD: 35 bar
- Removable coils in two versions: 12VDC/24VDC
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Linear flow
- Resolution: 500 pulses (half steps) or 250 full steps
- Hermetic design
- Only Bulk packing in boxes of 10 pieces
- Minimum order quantity 100 pcs (per type and delivery)

Options:

- Special version for transcritical R744 (CO₂) with 140 bar maximum working pressure upon request

**EXM/EXL
with Coil**

Selection Chart

Type	Part No.	Description	Nominal Capacity (kW)				Connection size / style
			R 410A	R 407C	R 22	R 134a	
EXM-B0B	800 400M	Valve less coil	5.5	5.0	4.8	3.7	1/4" ODM
EXM-B0D	800 401M	Valve less coil	11.6	10.5	9.9	7.7	
EXM-B0E	800 402M	Valve less coil	13.7	12.4	11.8	9.1	
EXM-125	800 403M	Coil 12VDC, 5 wires	-	-	-	-	-
EXM-246	800 404M	Coil 24VDC, 6 wires	-	-	-	-	-
EXL-B1F	800 405M	Valve less coil	17.0	15.4	14.6	11.3	1/4" ODF 8 mm ODM
EXL-B1G	800 406M	Valve less coil	23.0	20.7	19.7	15.2	
EXL-125	800 407M	Coil 12VDC, 5 wires	-	-	-	-	-
EXL-246	800 408M	Coil 24VDC, 6 wires	-	-	-	-	-

The nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R 407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R 22, R 134a, R 410a	+4°C	+38°C	1K

Technical Data

Max. working pressure PS	43 bar
MOPD	35 bar (normal or reverse flow)
Temperature range TS	TS: -30 to +70°C (liquid refrigerant) -30 to +60°C (ambient)
CE marking	Not required
Weight	Valve EXM: 65 g, EXL: 76 g Coil EXM: 124 g, EXL: 156 g
Package and delivery	Bulk pack with 10 pieces

Stepper motor type	Uni-polar, constant voltage
Full travel time	16.6 seconds at 30 pulse/sec. 5.5 seconds at 90 pulse/sec
Reference position	Mechanical stop at fully close position
Total number of pulses	500 half step (250 full step)
Insulation class	EXM: A EXL: E
Cable length	1m

Electrical Control Valves Series EX2

Pulse width modulated with exchangeable orifices

Can be used with EC2 display case controllers (see page 40)

Features

- Pulse width modulated
- Shut off function eliminates the necessity of a separate solenoid valve
- Dampened plunger reduces noise effects of water hammer
- One valve body can be combined with 6 orifices to make 7 capacity ranges up to 18.7 kW (R 407C)
- Applicable to all common refrigerants (HCFC, HFC) and for subcritical CO₂ applications
- Long lifetime, high reliability
- PS: 40bar, TS: -40 to +65°C

**EX2
with Orifice**

Selection Chart

Type	Part No.	Function	Capacity Q _n at 100% open Valve (kW) *					
			R 134a	R 22	R 404A	R 507	R 407C	R 744
EX2-M00	801 091	10 mm inlet / 12 mm outlet ODF	13.3	17.2	12.1	12.1	18.7	35.0
EX2-I00	801 090	3/8" inlet / 1/2" outlet ODF

EXO-001	801 086	Orifice 1	2.5	3.2	2.3	2.3	3.5	6.5
EXO-000	801 085	Orifice 0	1.2	1.6	1.1	1.1	1.7	3.3
EXO-00X	801 084	Orifice X	0.7	0.9	0.6	0.6	1.0	1.8
ASC 24V	801 062	Coil 24 VAC 50-60HZ (10W)						

*) Orifice should be selected at max. 80% of Q_n to allow covering the load fluctuation.

The nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R 407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R 22, R 134a, R 404A, R 507	+4°C	+38°C	1K
R 744	-40°C	-10°C	1K

For other operating conditions an Excel based selection tool can be downloaded from www.emersonclimate.eu, or use correction factors with following formula:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

- Q_n: Nominal valve capacity
 Q_o: Required cooling capacity
 K_t: Correction factor for evaporating and liquid temperature
 K_{Δp}: Correction factor for pressure drop at valve

Electrical Control Valves Series EX4, EX5, EX6, EX7, EX8

Features

- Multifunction as expansion valve, hot gas bypass, suction gas throttling, head pressure, liquid level actuator etc
- Fully hermetic design (no thread joints between valve body and motor compartment)
- Applicable to all common refrigerants (HCFC, HFC) and for subcritical CO₂ applications
- Stepper motor driven
- Short opening and closing time
- Very fast full stroke time
- High resolution and excellent repeatability
- Positive shut-off function to eliminate use of additional solenoid valve
- Bi-flow versions for heat pump applications
- High linear flow capacity
- Extremely wide capacity range (10 ... 100%)
- Continuous modulation of mass flow, no stress (liquid hammering) in the refrigeration circuit
- Direct coupling of motor and valve for high reliability (no gear mechanism)
- Ceramic slide and port for highly accurate flow and minimal wear
- Europe patent No. 0743476, USA patent No. 5735501, Japan patent No. 28225789
- Balanced force design
- Corrosion resistant stainless steel body and stainless steel connections
- PS: 45 bar
- Liquid Inlet Temperature TS:
Uniflow: -50 to +100°C, Biflow: -40 to +80°C

Selection Chart

Capacities see following pages

Type	Part No.	Flow Pattern	Capacity range	Inlet connection	Outlet connection	Electrical connection
EX4-I21	800 615	Uni-flow	10 ... 100%	3/8" ODF	5/8" ODF	M12 Plug
EX4-M21	800 616			10mm ODF	16mm ODF	
EX5-U21	800 618			5/8" (16mm) ODF	7/8" (22mm) ODF	
EX6-I21	800 620			7/8" ODF	1-1/8" ODF	
EX6-M21	800 621			22mm ODF	28 mm ODF	
EX7-I21	800 624			1-1/8" ODF	1-3/8" ODF	
EX7-M21	800 625			28mm ODF	35mm ODF	
EX8-M21	800 629			42mm ODF	42mm ODF	
EX8-U21	800 630			1-3/8" (35mm) ODF	1-3/8" (35mm) ODF	
EX8-I21	800 631			1-5/8" ODF	1-5/8" ODF	
EX4-U31	800 617	Bi-flow (Heat Pump)		5/8" (16mm) ODF	5/8" (16mm) ODF	
EX5-U31	800 619			5/8" (16mm) ODF	7/8" (22mm) ODF	
EX6-I31	800 622			1-1/8" ODF	1-1/8" ODF	
EX6-M31	800 623			28mm ODF	28mm ODF	
EX7-U31	800 626			1-3/8" (35mm) ODF	1-3/8" (35mm) ODF	

Cable and Connector Assemblies

Type	Part No.	Temperature Range	Length	Connector type to valve	Connector type to driver or controller	Illustration
EXV-M15	804 663	-50 ... +80°C	1.5 m	M12, 4 pins	Loose wires	
EXV-M30	804 664		3.0 m			
EXV-M60	804 665		6.0 m			

Capacity Data

Application Expansion Valve and Liquid Injection Valve - Nominal Capacity (kW)

Valve Type	R 407C	R 22	R 134a	R 404A	R 410A	R 23 *	R 124 *	R 744
EX4	2 .. 17.4	2 .. 16.5	1 .. 12.8	1 .. 11.5	2 .. 19.3	2 .. 17.8	1 .. 9.2	3 .. 33.5
EX5	5 .. 53	5 .. 50	4 .. 39	4 .. 35	6 .. 58	5 .. 54	3 .. 28	10 .. 102
EX6	15 .. 126	15 .. 120	10 .. 93	10 .. 84	15 .. 140	13 .. 130	7 .. 67	24 .. 244
EX7	35 .. 347	35 .. 330	25 .. 255	25 .. 230	40 .. 385	-	-	70 .. 670
EX8	100 .. 925	90 .. 880	70 .. 680	60 .. 613	100 .. 1027	-	-	180 .. 1789

*) Biflow versions are not released for R 124 and R 23
Capacity for biflow versions identical in both flow directions.

The nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R 407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R 22, R 134a, R 404A, R 410A	+4°C	+38°C	1K
R 124	+20°C	+80°C	1K
R 23	-60°C	-25°C	1K
R 744	-40°C	-10°C	1K

Guideline for selection of electrical control valves as expansion valves

ALCO Selection Tool

For easy and quick selection of Electrical Control Valves an Excel based selection tool can be downloaded from the Internet at www.emersonclimate.eu, or use the quick selection tables on the following pages.

The following guideline should be taken into consideration in order to obtain full advantages of the control valves:

- **Published capacities are maximum and there are no reserve capacities**
- Larger size of valve leads to shorter pull down period and shorter travel time i.e. faster response. For example, EX7 has maximum 3.2 seconds travel time. The valve has approximately 1.6 seconds travel time at 50% capacity operation.

Example:

System with R407C having two different operating conditions:

- A) 110 kW capacity at +4°C/+50°C with two stages compressor at 50% / 100% capacity
- B) 137 kW capacity at +4°C/+30°C with two stages compressor at 50% / 100% capacity

EX6 with 126 kW covers condition A, however is not sufficient to cover condition B. It is recommended to select larger valve i. e. EX7 with 337 kW at condition A and 293 kW at condition B.

Condition A:

$$\text{Full load ratio} = 110 / 337 = 33\%$$

$$\text{Partial load ratio} = (110/2) / 337 = 16\%$$

Condition B:

$$\text{Full load ratio} = 137 / 293 = 47\%$$

$$\text{Partial load ratio} = (137/2) / 293 = 23\%$$

The capacity ratios of system to valve are in all conditions higher than 10%. It is recommended to use EX7 rather than EX6.

Typical Order Package

- 1) Valve EX4, EX5, EX6, EX7 or EX8 (see page 11),
Plug and cable assembly EXV-M60
- 2) Controller Kit EC3-X32/EC3-X33 (s. page 36 and overview on page 148)
- 3) optional ECD-002 Display Unit with connection cable (s. page 36)

Typical Order Package

- 1) Valve EX4, EX5, EX6, EX7 or EX8 (see page 11),
Plug and cable assembly EXV-M60
- 2) Controller Kit EC3-X32/EC3-X33 (s. page 36 and overview on
page 148)
- 3) optional ECD-002 Display Unit with connection cable (s. page 36)

EX5	0.68	16	11	15
EX6	1.57	37	26	35
EX7	5.58	131	92	126
EX8	16.95	399	278	382

The nominal capacity (Q_n) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling
R 407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K
R 22, R 134a, R 404A, R 507	+4°C	+38°C	1K

For other operating conditions use Excel based Selection Tool (download from www.emersonclimate.eu) or use the following quick selection tables.

Biflow versions are not released for hot gas bypass applications. EX4 .. EX8 must be installed with motor downward in hot gas line applications. This insures the valve life expectancy. Install a check valve on main hot gas line just after branch to Control Valve.

Condensing Temperature °C	Extended Capacity kW			Valve type
	R 22 / R 407C	R 134a	R 404A / R 507	
60 bubble point for all refrig. (64 dew point for R 407C)	7	4.9	5.8	EX4
	23	16	19	EX5
	54	38	45	EX6
	191	135	161	EX7
	581	411	488	EX8
50 bubble point for all refrig. (54 dew point for R 407C)	6.1	4.3	5.5	EX4
	20	14	18	EX5
	46	32	41	EX6
	163	115	147	EX7
	495	348	447	EX8
40 bubble point for all refrig. (45 dew point for R 407C)	4.9	3.7	4.9	EX4
	16	12	16	EX5
	38	27	36	EX6
	136	95	130	EX7
	414	289	394	EX8
30 bubble point for all refrig. (35 dew point for R 407C)	4.3	2.8	4	EX4
	14	9	13	EX5
	32	22	31	EX6
	112	78	111	EX7
	340	236	336	EX8

Typical Order Package

- 1) Valve EX4, EX5, EX6, EX7 or EX8
Plug and cable assembly EXV-M60
- 2) Driver EXD-U00 Part No. 804 557 and
Terminal Kit K09-U00 Part No. 804 559

Application Suction Pressure Regulation (evaporating or crankcase pressure) - Nominal Capacities (kW)

Valve Type	Kv, m ³ /h	R 407C	R 22	R 134a	R 404A
EX6	1.57	3.9	4.1	3.1	3.5
EX7	5.58	14	15	11	13
EX8	16.95	42	45	34	38

The nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop
R 407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.15 bar
R 22, R 134a, R 404A	+4°C	+38°C	1K	0.15 bar

For other operating conditions use Excel based Selection Tool (download from www.emersonclimate.eu) or use the following quick selection tables.

For biflow versions attention should be paid to the temperature range TS -40°C bis +80°C!

EX6 .. EX8 must be installed with motor downward in suction line applications. This insures the valve life expectancy.

Multiply above nominal capacities by following factors to obtain capacities at different pressure drops:

ΔP, bar	0.10	0.15	0.20	0.30
Correction factor	0.82	1.00	1.15	1.41

Example:

EX6 provides 3.5 kW at 0.15 bar pressure drop with R404A or $3.5 \times 1.41 = 4.9$ kW at 0.3 bar pressure drop.

Condensing Temperature °C	R 134a Extended capacity kW					Valve type

Typical Order Package

- 1) Valve EX6, EX7 or EX8
Plug and cable assembly EXV-M60
- 2) Controller Kit EXD-U00 Part No. 808 038

Application hot gas flow such as heat reclaim application

Nominal Capacities (kW)

Valve Type	Kv, m³/h	R 22 / R 407C	R 134a	R 404A / R 507	R 410A
EX6	1.57	11	9	10	13
EX7	5.58	39	33	36	47
EX8	16.95	119	101	108	144

The nominal capacity (Qn) is based on the following conditions:

Refrigerant	Evaporating temperature	Condensing temperature	Subcooling	Pressure Drop	Isentropic Efficiency
R 407C	+4°C (dew point)	+38°C bubble point / +43°C dew point	1K	0.5 bar	80%
R 22, R 134a, R 404A, R 507	+4°C	+38°C	1K	0.5 bar	80%

For other conditions see following tables.

Valves must be installed with motor downward in hot gas line applications. This insures the valve life expectancy. Bi-flow versions are not released for hot gas flow applications.

Electrical Control Valves Series EX4, EX5, EX6, EX7, EX8

Technical Data

Compatibility *	HCFCs, HFCs, CO ₂ Mineral and POE lubricants
MOPD (maximum operating pressure differential)	EX4/EX5/EX6/EX7: 35 bar EX8: 30 bar
Max. working pressure, PS	45 bar
Medium temperature range:	Liquid inlet temperature
Uniflow version	TS: -50 ... +100°C
Biflow version	TS: -40 ... +80°C
Ambient temperature	-40 ... +55°C
Storage temperature	-40 ... +70°C
CE marking EX4/EX5	not required
EX6/EX7/EX8	required, Cat I, Module A
Salt spray test	non-corrosion stainless steel body
Humidity	5 ... 95% R.H.

*) Valves are not released for use with inflammable refrigerants.

Connections	ODF stainless steel fittings
Protection accordance to IEC 529, DIN 40050	IP 67 with Alco supplied cable connector assembly
Vibration for non-connected and fastened valve	4 g (0 .. 1000 Hz, 1 Oktave /min.)
Shock	20g at 11 ms, 80g at 1 ms
Net weight	0.5 kg (EX4), 0.52 kg (EX5), 0.6 kg (EX6), 1.1 kg (EX7), 1.5 kg (EX8)
Full travel time	EX4/EX5/EX6: 1.5 s EX7: 3.2 s, EX8: 5.2 s
Seat leakage	Positive shut-off better than solenoid valve
External leakage	≤ 3 g / Jahr
Package and delivery	Single pack, without electrical connector

output signal 4 ... 20 mA		PT5			53
Universal Controllers					
with 2 digital inputs, 3 temperature inputs, 4 relay outputs			EC2-112	EC2-111	38

Electronic Superheat Controllers and Stepper Motor Drivers

ALCO designed superheat controllers and valve drivers for stepper motor driven control valves for all commercial refrigeration and air-conditioning applications.

EC3-X33 is a universal superheat controller without network communication for air conditioning, refrigeration and industrial applications such as chillers, industrial process cooling, rooftops, heat pumps, package unit, close control, cold room, food process and air driers. The **ECD-002** Display/keypad Unit is necessary for setup but not for operation of the controllers. ECD-002 can be connected or disconnected to EC3-X33 at any time.

In the event of a cooling request and compressor start-up, EC3-X33 needs to be informed. This can be achieved by a digital input. EC3-X33 will start to control the refrigerant mass flow stand-alone by precise positioning of the Control Valve under different operating conditions such as compressor start-up, start of a further compressor, high head pressure, low head pressure, high load, low load and partial load operation. EC3-X33 is capable for diagnostics and alarm. The alarm can be received via relay output as well as optical LED/alarm code on ECD-002.

The **EC3-X32** has a similar function as EC3-X33 but with a TCP/IP Ethernet communication interface enabling the controller to be directly connected to a network or a PC via the standard Ethernet port. The EC3-X32 controller has embedded WebPages to

enable the user to visualise the parameter list with a standard WebBrowser like Internet Explorer®. When connected to a suitable connection, the controller is able to automatically send alarms by email to a PC or mobile phone.

For use with **Copeland Scroll Digital™** technology two other models are available. **EC3-D73** is a stand-alone version for use with the ECD-002 Display / Keypad unit whilst the **EC3-D72** has a TCP/IP Ethernet interface.

A 0-10V demand signal is required from a third party controller to control a tandem system with one fixed and one digital compressor. A patented algorithm synchronises the operation of the PWM digital compressor valve and the EX series electrical control valve.

EXD-U Universal Drivers are stepper motor drivers and enable the operation of ALCO stepper motor driven valves EX4 ... EX8 as Electronic expansion valve, Capacity control by means of hot gas bypass or evaporating pressure regulator, Crankcase pressure regulator, Condenser pressure regulator, Liquid level and Liquid injection.

The universal driver module can be connected to any controller which can provide a 4-20mA or 0-10V analogue signal. The output is the opening/closing of EX4 ... EX8 and consequently the control of the refrigerant liquid or vapour mass flow in accordance with the analogue input.

Display Case and Coldroom Controllers

The compact **EC2** series is available with either TCP/IP or LON communication protocols and covers also applications where the display cases are connected to a multiple compressor application. In this case, the dedicated compressor relay on the controller is no longer required and is available as a spare relay to perhaps switch the display case lighting.

The controllers can therefore be split into two groups; controller is required to switch the compressor directly; integral application and those connected to a multiple compressor (rack) system.

The **EC2-21x**, **EC2-31x** and **EC2-35x** have the dedicated compressor relay

The **EC2-29x**, **EC2-39x** and **EC2-37x** are for use with the rack system.

The **EC2-200** series of controllers are specifically designed for display cases for use **with TXV**. The controller performs the function of thermostat, defrost and fan management and is capable of operating a standalone condensing unit or being incorporated into a distributed system controlled by a rack.

The **EC2-300** series incorporate the functionality of the EC2-200 model but additionally have a superheat algorithm to control the **EX2 control valve**:

EC2-31x / EC2-39x (Temp / Temp): the superheat is controlled using two temperature sensors.

EC2-35x / EC2-37x (Pressure / Temp): the superheat is controlled using a pressure transmitter (PT5 series) in conjunction with a temperature sensor.

Whilst the products were developed for display cases, they may also be applied to control a simple coldroom.

The **EC3 series** utilize in principle the same software technology of the EC2 series but provide additional inputs and outputs to satisfy the requirements of even the most demanding systems. Like the EC2, the EC3 series may be connected together to form larger systems combining the control of multiple compressors and fans. The optional **ECD-001 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

The **EC3-300** series are specifically for use with stepperv valve series (EX4, EX5, EX6, EX7, EX8). In case of power loss the Electrical Control Valve needs to be closed to avoid flooding of the compressor, therefore each valve requires a battery backup. For this reason, the battery together with its automatic charging circuit has been incorporated into the controller housing significantly saving installation time as well as space in the electrical enclosure.

Condensing Units, Rack and Condenser Controllers

Condensing Unit Controllers

The **EC2-500** series of controllers are suitable for controlling the compressors and fans of a condensing unit. Digital inputs are available for individual compressor feedback loops from the safety chain, which typically consists of low and high pressure switches together with motor protection and oil management controls. A common feedback is also available for the fans.

PT5 series pressure transmitters are used to measure the suction and discharge pressures to modulate the compressor and fan capacities.

Following models are available:

EC2-512: to control up to 2 compressors (on/off control) and 2 fans (on/off control)

EC2-552: to control up to 2 single stage compressors or tandem compressor condensing units with a **Copeland Scroll Digital™** compressor. It features a 0...10V output to connect to an Alco Controls **FSP fan speed power module** for variable fan speed control. Alternatively this output may be used to control fan motor speed with an inverter or to connect to ECM type fan motors directly.

Rack and Condenser Controllers

The **EC3 series** utilize in principle the same software technology of the EC2 series but provide additional inputs and outputs to satisfy the requirements of even the most demanding systems. Like the EC2, the EC3 series may be connected together to form larger systems combining the control of multiple compressors and fans. Many controllers include 0...10V outputs that may be used in conjunction with frequency inverters and/or the **FSP series of fan speed power modules**.

Commonly referred to as “hot application controllers”, the **EC3-600, -700, -800 & -900** series controllers are designed for the control of compressors and condensers. Racks with one or two suction groups and up to 8 single stage compressors including a **Copeland Scroll Digital™** or 6 multistage compressors can be managed. **EC3-65x** and **EC3-93x** series have been designed to control a **Copeland Scroll Digital™** and incorporate a triac to switch the PWM solenoid.

The control of condenser arrays with up to 6 fan stages as well as a combined control of Rack and Condenser is also possible. Refer to the table on page 32 for a complete product listing.

The optional **ECD-000 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

Condenser Controllers

The **EC2-700** series provide an economical solution for condenser control.

Two models are available:

EC2-71x: to control up to 4 fans, on/off. A feedback loop is available for each fan.

EC2-74x: provides a 0...10V output to feed **FSP series fan speed power modules**. Several FSP modules may be connected in parallel to speed control all fans simultaneously.

The **EC3 series** provides additional inputs and outputs to satisfy the requirements of even the most demanding systems:

EC3-75x: for condensers with up to 6 stages, one with continuous control output 0 ... 10V, heat recovery control.

The optional **ECD-001 Display/keypad Unit** is available to display the system temperatures, indicate system status and to modify parameters.

The Universal series of Controllers

are useful additions to the series. They are typically used to enable the monitoring of temperatures from integral display cases that do not have communication facilities as well as potentially providing additional input and output functionality to control systems. Example of such applications could be for switching display case lighting or for the monitoring of individual pressure switches on multiple compressor Racks.

Network Communication and System Management

The Alco EC Series of drivers and controllers utilise the very latest in communication technology which is setting new standards in the refrigeration industry. Energy saving algorithms are incorporated into many of the controllers including: Adaptive superheat and thermostat modulation, defrost on demand & suction and discharge setpoint shift.

All **EC2** or **EC3** controllers are available in two communication protocols **TCP/IP Ethernet** and **LON**.

TCP/IP Ethernet:

The controllers are Ethernet based enabling them to be connected directly to any computer via the Ethernet port (RJ45 connector). The controllers act as web server enabling the engineer to pick-up standard configuration pages directly from the controllers without the need of any additional hardware or software. Each controller can be connected to the PC using a crossover cable however, the most convenient way to connect a controller to the PC is to use a router that will automatically assign a TCP/IP address. Either way, the engineer can access the monitoring and parameter configuration pages by entering the TCP/IP number into the address line of an Internet browser such as Mozilla or Microsoft Internet Explorer. User name and password protection is provided to protect the controller from unauthorized access.

- Local alarms via email *
- Remote alarms via email **
- * Controller must be connected to the PC
- ** Router must be connected to an external telephone line and / or the Internet via an Internet Service Provider (ISP).

A new TCP/IP driver has been added to the EMS Monitoring Server enabling the TCP/IP controllers to be incorporated into a system whereby the temperature and status data from multiple controllers can be visualised simultaneously on one screen.

LON Protocol:

An identical range of free-topology LON FTT10 based controllers is available and compliments the TCP/IP controller series. LON is an open system protocol created by Echelon and therefore benefits from not being tied to a restrictive third party protocol.

LON based controllers can be connected to each other to form simple networks for applications requiring master / slave or synchronized defrosting. However, they can also be connected to a Monitoring Server to fulfill the most sophisticated system requirements.

The Monitoring Server acts as an interface from the LON network containing EC2 and EC3 to the outside world. Remote access can be made using standard telephone line; analog or digital ISDN. Alternatively, data can be transmitted via the Internet or a dedicated company Intranet using TCP/IP. Either way, visualization may be made using an industry standard Internet web browser.

Homepage of EC2-312 TCP/IP Controller

The **TCP/IP based Controllers** offer a practical solution particularly for smaller installations that require communication for monitoring purposes without the need for customized visualization. For many installations, an additional monitoring server is not required.

Other functions:

- Monitoring of system temperatures and pressures as well as relay status information.
- Read/write of EC2 & EC3 control parameters
- Real time graphical visualization
- Log function of up to one months data directly on the controller
- Log function of data to a PC *
- Storage and retrieval of system parameter.

By transmitting the system status information as temperatures or pressures, used to control the refrigeration circuit in each subsystem, together with other vital system data, the system administrator can potentially identify system failures before they become an expensive stock loss situation. Should a system failure occur, the controllers automatically transfer to an emergency-operating mode whilst sending a system error message to the monitoring server.

The benefit of a **centralized data acquisition system** is that it can dramatically reduce the costs associated with food, which cannot be sold as a result of failing to meet the criteria set by the food hygiene regulations.

The **monitoring server** is typically connected to a analog or digital phone line and can communicate a system alarm to a remote location via fax, email or SMS. In a similar way to the TCP/IP controllers, the engineer can visualize the system without the need of any additional hardware or software. The system can be visualized by entering the TCP/IP address of the EMS Monitoring server into the address line of the Internet web browser. In fact, the advancement of telecommunication systems are such that a maintenance engineer equipped with a laptop computer and mobile telephone can interact with the system from any location.

Superheat Controllers Series EC3-X32 / EC3-X33

for stable superheat control with stepper motor driven electrical control valves Series EX4 - EX8

Digital Superheat Controllers series EC3-D72 / EC3-D73

for stable superheat control with EX4...EX6 electrical control valves and automatic synchronisation of the PWM capacity control valve incorporated into the Copeland Scroll Digital™ compressor technology

Features

- Limitation of evaporating pressure (MOP)
- Feed-through of 4 ... 20mA signal of evaporating pressure transmitter to operate third party controllers with a common pressure transmitter
- Intelligent alarm management, superheat alarm
- Monitoring of sensors and sensor wiring, detection of sensor and wiring failures
- Integral rechargeable battery to close Electrical Control Valve in case of power loss
- Electrical connection via plug-in type screw terminals
- Aluminum housing for DIN rail mounting

Additional features EC3-X32 and EC3-D72 with TCP/IP

- WebServer functionality allows monitoring and configuration of controllers through a standard WebBrowser (e.g. Internet Explorer®)
- Internal data logging and alarm messaging by email
- Multiple language support (www.emersonclimate.eu)
- Freeze protection
- Low and high superheat alarm
- Low pressure switch function/Alarm

EC3-X33 with ECD-002

ECD-002 Display Unit

- Front panel mounted interface for parameter and status read-out and controller setup via keypad
- Indicator LEDs for valve opening/closing, external ON and alarm

Selection Table

Description	TCP/IP			Stand alone		
	Type	Part No. single unit	Part No. Kit*	Type	Part No. single unit	Part No. Kit*
Superheat Controller	EC3-X32	807 782	808 037	EC3-X33	807 783	808 036

Transformer	25VA	ECT-323	for EX4 to EX7
	60VA	ECT-623	for EX8

Typical Ordering package

System with 100 kW cooling capacity and refrigerant R22 requires the following parts:

EX6	Electronic Expansion Valve	ECN-N60	NTC Temperature Sensor
EX5-N60	Electrical Cable and Plug assembly	PT5-07M	Pressure Transmitter
EC3-X33	Superheat Controller Stand-alone	PT4-M60	Cable assembly PT5 6.0m
K03-X33	Terminal Kit for EC3-X33	ECD-002	Display (optional)
ECT-323	Transformer 25VA	ECC-N30	Connection cable EC3 to ECD (opt.)

PT5

PT4-Mxx

ECT-323

Universal Driver Modules Series EXD-U00

for the operation of ALCO stepper motor valves EX4 / EX5 / EX6 / EX7 / EX8 as

- Solenoid Valve
- Electrical Expansion Valve
- Hot Gas Bypass or Evaporating Pressure Regulator as capacity control
- Crankcase Pressure Regulator
- Heat Reclaim Regulator
- Liquid Level Control

Features

- Plug and play, no parameter setting
- Valve opening proportional to 4-20mA or 0-10V analogue input signal
- Digital input can be used to force valve closing
- Dip-switches for selection of Electrical Control Valves, analogue input and start mode
- Aluminium housing for DIN Rail mounting
- Easy wiring
- Fully tested and ready for operation
- CE-marking for electromagnetic compatibility

Options

- Uninterruptible Power Supply ECP-024 to automatically close valve after power down

EXD-U00

Capacity Data

see Electrical Control Valve EX4 ... EX8 data.

For function as:

- Expansion Valve - Superheat Control see page 12
- Capacity Control by means of Hot Gas Bypass see page 20
- Evaporating Pressure Regulator or Crankcase Pressure Regulator see page 21
- Condensing Pressure Regulation and Liquid Duty see page 23
- Application hot gas flow such as heat reclaim application see page 25

See datasheet A3.5.048 for detailed application drawings and technical data. For other than the specified operating conditions an Excel based **Selection Tool** can be downloaded from www.emersonclimate.eu.

ECP-024

Display Case and Universal Controllers Series EC2

with Web Server functionality and TCP/IP Protocol
or with LON Protocol (FTT-10)

Features of EC2-3 models:

- Superheat control for Pulse Width Modulated Valves (e.g. EX2-Series) see Selection Table
- Self-adapting controller, no user setup necessary
- Limitation of evaporating temperature (MOP)

Features of all models:

- Air temperature control
- Defrost timer for natural, electric or hot-gas defrost with fan control
- Integrated timer and alarm functions
- All parameters and functions are programmable:
 - via standard web browser (EC2-xx2 models)
 - via LON communication (EC2-xx1 models)
 - with integral keypad
- Password protection to eliminate unauthorised use
- Multiple language support (www.emersonclimate.eu)
- Standard 29 x 71 mm cutout dimensions
- 2 ½ digit display in °C or °F
- CE approved

Communication LON (see page 35)

- Echelon® LON FTT-10 interface based on the Lon-works® standard for monitoring and configuration through a supervisory system such as the EMS Monitoring Server

Communication TCP/IP Ethernet

- Web Server function provides monitoring and configuration through a standard web browser. Ethernet interface, as used in most office PCs.
- Graphical visualisation via built-in webpages
- Fixed or dynamic TCP/IP address with username and password
- Alarms via e-mail
- Up to 30 days datalog

**EC2
Controller**

Options

- Standard screw terminal kit K02-000 available for all models. OEM crimp versions available upon request.
- Ethernet cable ECX-N60 for EC2-xx2
- NTC temperature sensors
- Transformers for 230VAC mains

Example for Webpage monitoring

Coldroom Controller Series EC3

Temperature and Superheat Control of EX4 .. EX8 (Stepper Motor)

Features

- Superheat control with self-adapting algorithm for Stepper Motor driven ECVs (EX4 ... EX8)
- Thermostat, fan & defrost control
- Limitation of evaporating temperature (MOP)
- Analog inputs: 3 NTC temperature sensors
- with integral backup battery to close Control Valve in case of power loss
- Analog input for suction pressure measurement using Alco PT5 Series pressure transmitters
- Digital inputs for compressor safety and coldroom door contact
- Relay outputs for compressor, defrost and alarm plus programmable relay
- All parameters and functions are programmable:
 - via TCP/IP Ethernet controller (EC3-xx2)
 - via LON communication (EC3-xx1 models)
 - with keypad of optional display unit ECD-001
- Electrical connections via plug-in type screw terminals
- Lightweight aluminum enclosure for DIN rail mounting
- Multiple language support (see www.emersonclimate.eu)
- CE approved

Communication TCP/IP Ethernet

Condenser- and Condensing Unit Controllers Series EC2

with Webserver Function and TCP/IP or with LON FTT-10 Interface

Common Features

- Maintenance and alarm management
- Sensor failure handling
- Inputs for common low and common high pressure alarms
- Configuration data stored in non-volatile memory
- Electrical connection via plug-in type screw terminals
- with Webserver Function and TCP/IP or with LON FTT-10 Interface (see page 35)
- Operation and commissioning via local or remote PC
- CE approved

**EC2
Controller**

Condenser Controllers

- Compact controller to control condensing pressure by modulation of fan capacity

Condensing Unit Controllers

- To control a combination of compressors and condenser fans based on suction and condensing pressure respectively
- Control of Copeland Scroll Digital™ Compressors

Communication LON

- Echelon® LON FTT10 interface based on the LonWorks® standard for monitoring and configuration through a supervisory system such as the EMS Monitoring Server

Communication TCP/IP Ethernet

- Web Server Function provides monitoring and configuration through a standard web browser. Ethernet interface, as used in most office PCs
- Graphical visualisation via built-in webpages
- Fixed or dynamic TCP/IP address with username and password
- Alarms via e-mail
- Up to 30 days datalog
- Multiple language support (see www.emersonclimate.eu)

Rack and Condenser Controllers Series EC3-600, -700, -800, -900

with Webserver Function and TCP/IP Ethernet protocol,
or with FTT10 LON Interface

Common Features

- Maintenance and alarm management
- Sensor failure handling
- Inputs for common low and common high pressure alarms
- Configuration data stored in non-volatile memory
- Aluminum enclosure for DIN-rail mounting
- Electrical connection via plug-in type screw terminals
- Operation and commissioning via local or remote PC
- Control of Copeland Scroll Digital™ Compressors (EC3-62x)
- CE approved
- Communication via:

Echelon LON Protocol for full network capabilities

or

TCP/IP Ethernet with Web Server function (see page 35)

EC3-600

ECD-000

Features of ECD-000

- Connection to EC3 Series via RJ45 Western digital plug. No further power cables required.
- 2½ digit display
- Indicator LEDs for compressor and alarm status
- 4 keys allow parameter modification if necessary
- Easy mounting in panels with 71 x 29 mm cutout
- IP65 if mounted in front panel

Technical Data

EC3 Controller

Supply voltage	24 VAC ±10%, 50/60 Hz Class II only
Power consumption	20 VA max.
Plug-in connector	Removable screw terminals
Digital I/Os	wire size 0.5 ... 2.5 mm ²
Analog I/O	wire size 0.14 ... 1.5 mm ²
Communication interface	LON: FTT10 TCP/IP: Ethernet with Web Server
Temperature storage	-20 ... +65°C
operating	0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP20
Weight	~ 810 g
Mounting	DIN-rail mount

ECD-000 Display Unit

Supply voltage	via ECC-N10 from EC3 controller
Display	Numeric segmental display, LED red, 2½ digits, numeric value device status and alarm indication
LEDs	1 x unit indicator bar/°C 1 x alarm LED
Connecting lead	1,0 m (ECC-N10)
Operating Keys	4 operating keys: programming, service/up, select/down
Temperature storage	-20 ... +65°C
operating	0 ... +60°C
Humidity	0 ... 80% r.h. non condensing
Protection class	IP 65 (front panel with gasket)
Weight	~ 52 g
Mounting	Panel mount (71x29mm cutout)

Block Diagrams

EC3-65 Rack Controller for 8 single-stage compressors or 7 single-stage Compressors and 1 Digital Scroll™

Inputs

- 1 = Discharge temperatures of up to 8 compressors
- 2 = Suction pressure
- 3 = Discharge pressure
- 4 = Serial alarm inputs for up to 8 compressors
- 5 = Low pressure alarm
- 6 = High pressure alarm
- 7 = Oil level alarm
- 8 = Refrigerant level alarm

Outputs

- 9 = for up to 8 compressors
- 10 = to control a Digital Scroll™

EC3-67x Rack Controller for Capacity Controlled Compressors

Inputs

- 1 = Suction pressure
- 2 = Discharge pressure
- 3 = Serial alarm inputs for up to 6 compressors
- 4 = Low pressure alarm
- 5 = High pressure alarm
- 6 = Oil level alarm
- 7 = Refrigerant level alarm

Outputs

- 8 = 12 outputs for up to 6x2 / 4x3 / 3x4 capacity controlled compressors

EC3-75x Condenser Controller

Inputs

- 1 = Ambient temperature
- 2 = Humidity sensor
- 3 = Condensing pressure
- 4 = Serial alarm inputs for up to 6 fans
- 5 = High pressure alarm
- 6 = Heat recovery demand

Outputs

- 7 = For up to 6 stages, from which 1 can be speed controlled
- 8 = Speed controlled fan (see 7)
- 9 = Heat recovery solenoid

Block Diagrams

EC3-81x Dual Circuit Rack Controller (4 + 3 compressors)

Inputs

- 1 = Discharge temperature inputs of 3 compressors
- 2 = Suction pressure group A
- 3 = Suction pressure group B
- 4 = Serial alarm input for each compressor respectively
- 5 = Refrigerant level alarm
- 6 = Low pressure alarm group A
- 7 = Low pressure alarm group B
- 8 = High pressure alarm
- 9 = Oil level alarm

Outputs

- 10 = For up to 4 compressors suction group A
- 11 = For up to 3 compressors suction group B

EC3-93x Rack and Condenser Controller (up to 4 compressors + condenser)

Inputs

- 1 = Discharge temperature
- 2 = Ambient temperature
- 3 = Suction pressure
- 4 = Condensing pressure
- 5 = Serial alarm inputs for 4 compressors
- 6 = Low pressure alarm
- 7 = High pressure alarm
- 8 = Oil level alarm
- 9 = Refrigerant level alarm
- 10 = Serial alarms for 3 fans
- 11 = Heat recovery demand

Outputs

- 12 = Up to 4 compressors
- 13 = Up to 3 fans, from with 1 fan can be speed controlled
- 14 = Speed controlled fan (see 13)
- 15 = Heat recovery solenoid
- 16 = to control a Digital Scroll™

Electronic Smart Starter ESC-255 / ESC-325

The electronic Smart Starter ESC-255 / ESC-325 is used for switching, protection and starting current limitation of single phase compressors in refrigeration and air-conditioning applications

Features

- For single phase motors with up to 25A / 32A max. operating current
- Limitation of starting current to less than 45A
- Self adjusting to motor current - no manual adjustment or calibration necessary
- Many motor protection functions:
 - Low voltage shut down
 - Locked rotor recognition and shutdown
 - Delay function to limit number of motor starts per hour
- Self diagnostics
- Indicator LED
- Thyristor protected contactor for long life
- No extra motor contactor needed
- Easy Installation

ESC-255

Standards:

- **CE** per Low Voltage Directive (EN 60947-1/EN 60947-5-1)
- EN 60947-4-2 Contactors and motor starters - AC semiconductor motor controllers and starters Flicker (EN 61000-3-3 / IEC-1000-3-11)
- Safety and environmental requirements for refrigeration systems and heat pumps (EN 378)

Selection Chart ESC

Type	Part No.	Max. compressor running current
Smart Starter ESC-255	805 177	25A
Smart Starter ESC-325	805 178	32A

including mounting clip, plug, connectors, operating instructions

Technical Data

Operating voltage	230 V 50 Hz nominal
Compressor starting current	limited to max. 45A
Operating temperature	-20 ... +65°C non condensing
Storage temperature	-40 ... +85°C non condensing
Start capacitor	200 ... 240 uF

Weight	400 g
Protection acc. IEC 529	IP 20
Max. vibration	4 g (at 10 ... 1000 Hz)
Time delay after stop	3 min

Wiring Diagram

Start Current vs Time

- (a) Motor without current limitation
- (b) Large motor with ESC Smart Starter
- (c) Small motor with ESC Smart Starter

Pressure Transmitter Series PT5

Pressure Transmitters convert a pressure into a linear electrical output signal. PT5 has been optimized for Refrigeration applications.

Features

- Sensitive pressure cells with strong primary output signals for the precise operation of superheat, compressor or fan controls systems
- Fully hermetic
- PT5-xxM pressure connector 7/16-20 UNF with Schrader valve opener
- PT5-xxT with 6mm x 50mm long tube for applications requiring a fully hermetic system solution
- Vibration, shock and pulsation resistant
- Protection class IP 65
- Easy install M12 electrical connection with pre-assembled cable assemblies available in various lengths
- Output signal 4 to 20 mA
- Calibrated for specific temperature and pressure ranges to fulfill application demands in airconditioning and refrigeration systems
- Standard pressure ranges compatible with former Emerson pressure transmitters - Sealed gauge pressure

Options

- Other pressure ranges and calibrations
- Delivery in multipacks

Standards:

•  per EMC Directive

Accuracy Performance PT5

	Temperature range	Total error*
PT5-07M/T	-40 ... +80°C	≤ ± 1 % FS
PT5-18M/T	-20 ... +60°C	≤ ± 1 % FS
PT5-30M/T	0 ... +40°C	≤ ± 1 % FS
	-20 ... +60°C	≤ ± 2 % FS
	-40 ... +80°C	typically ≤ ± 2 % FS
PT5-50M/T	0 ... +40°C	≤ ± 1 % FS
	-20 ... +60°C	≤ ± 2 % FS
	-30 ... +80°C	typically ≤ ± 2 % FS

*) Total error includes non-linearity, hysteresis, repeatability as well as offset and span drift due to the temperature changes.

Note: % FS is related to Percentage of Full sensor Scale.

Electrical connection

Pressure transmitters PT5 with current output (2-wire connection) offer following advantages:

1. More suitable for signal transmission over long distances
2. Higher immunity to electromagnetic interference

Note: Changing the length of the electrical connection lead beyond 1.5 m can have a negative impact on electromagnetic compatibility. Additional protection may be required.

Electronic Fan Speed Controller Series FSY

Features

- Pressure actuated fan speed control
- Adjustable pressure for Cut-off
- High Voltage Triac (800 Volts)
- Integrated protection circuit against voltage peaks
- Compact design
- Protection IP65
- Easy mounting and adjustment
- Easy retrofit in existing plants
- No additional gasket required (completely molded into plug)
- Multi-position plug with EMC filter incl. 1,5m (opt. 3 and 6m) cable for flexible installation
-  per EC 89/336/EC (together with FSF cable)

FSF-N60	0,22 kg	
Housing material	PC and PA	

Function Diagram

The control behaviour can be easily described by looking at the function of output voltage versus input pressure: In the **maximum range** the FSY provides a constant output voltage of approximately 1% below the supply voltage. The fan is running at maximum speed. Along the **proportional range** the output voltage varies between maximum and minimum voltage of approximately 45% of the supply voltage. This causes the fan to slow down from maximum to minimum speed.

Further decrease of pressure in the minimum range leads to cut-off of the fan motor. Reincrease of input pressure will start the motor with a hysteresis of approximately 0.7 bar to avoid cycling. The pressure from which motor cuts off is adjustable (see pressure range).

Electronic Fan Speed Power Module FSP and Control Module FSE

Features FSP

- Can be used in combination with ALCO FSE Control Module, EC2, EC3 and other electronic controllers which provide a 0...10 V output signal for condensing pressure control
- Versions for 3- and 1- phase motors approved for phase cut operation
- Paralleling of fan motors up to maximum current
- Reduced fan noise level during low ambient temperature conditions
- Energy saving due to improved cooling efficiency
- Short start impulse during partial load to overcome friction and windmilling
- Easy installation with cables for power supply and motor connection factory wired
- IP67 protection for outdoor mounting

**FSE

FSE-N60	804 682			6.0	220

for connection to EC2, EC3 and other controllers:

		FSP-L15	804 693	1.5	
		FSP-L30	804 694	3.0	

Selection Dependent on Product Combination

Selection

1. Select a **Power Module FSP** by the total maximum operating current and phases of condenser fan motors
2. Select a **Control Module FSE** based on the pressure requirements of the refrigerant used:
 - FSE-01S for R 134a,
 - FSE-02S for R 22 / R 404 A / R 407C / R 507
 - FSE-03S for R 410A
 - or a controller of the EC Series
 - or another electronic controller which provides a 0...10 V output signal
3. Select a **Cable Assembly**
 - a) for connection of **FSE to FSP**:
FSE-Nxx: -25 ... +80°C
 - 3 lengths: (1.5 - 3.0 - 6.0 m)
 - b) or for use with an electronic controller with 0...10V signal output:
 (e.g. EC2-74x, EC2-54x, EC3-75x, EC3-92x):
FSP-Lxx: -50 ... +80°C
 - 2 lengths (1.5 - 3.0 m)

Function Diagram

The behaviour of FSP together with FSE can be described by the following control diagram:

The top curve describes the fan speed at decreasing, the lower curve at rising pressure. At high condensing pressure fan is running with maximum speed (top right). In the proportional range of the curve fan speed is decreased with pressure. If the pressure falls below the specified limit the fan is cut-off. A large hysteresis is built-in to prevent fan cycling at this point. Pressure must increase by approximately 1 bar before fan restarts. A short start pulse helps fan to overcome friction or windmilling before it supplies the proportional value. Along the proportional range the fan speed varies between 20% and 100% for 3-phase motors and between 30% and 100% for single phase motors.

Technical Data FSP

Temperature Range Operation	-20°C to +65°C
Protection class (IEC 529 / EN 60529)	IP 67
Signal Input Voltage	0 ... 10 VDC
Mounting	Direct with screws or with optional DIN Rail Kit FSP-K00 Ord. No. 800 379

FSE

Temperature Range Operation	-20°C to +65°C
Protection class (IEC 529 / EN 60529)	IP 65
Supply Voltage	10V, supplied by FSP Module
Operating Current 0 ... 10 VDC output	max. 1 mA
Medium Compatibility	HFC, HCFC, synth. / mineral oils
Pressure Connection	FSE-01S / FSE-02S brass FSE-03S stainless steel

Thermo[®]-Expansion Valves

Expansion Valves

Basic Terms and Technical Information

Operating principles

ALCO Thermo®-Expansion valves control the superheat of refrigerant vapour at the outlet of the evaporator. They act as a throttle device between the high pressure and the low pressure sides of refrigeration systems and ensure that the rate of refrigerant flow into the evaporator exactly matches the rate of evaporation of liquid refrigerant in the evaporator. Thus the evaporator is fully utilized and no liquid refrigerant may reach the compressor.

Description of bulb charges

The application ranges of Thermo®-Expansion valves are heavily influenced by the charge selected.

Liquid charges

The behaviour of Thermo®-Expansion valves with liquid charges is exclusively determined by temperature changes at the bulb and not subject to any cross-ambient interference. They feature a fast response time and thus react quickly in the control circuit. Liquid charges cannot incorporate MOP functions. Maximum bulb temperatures shall not exceed 75° C.

Gas charges

The behaviour of Thermo®-Expansion valves with gas charges will be determined by the lowest temperature at any part of the expansion valve (power assembly, capillary tube or bulb). If any parts other than the bulb are subject to the lowest temperature, malfunction of the expansion valve may occur (i.e. erratic low pressure or excessive superheat). ALCO thermo expansion valves with gas charges always feature MOP functions and include ballasted bulbs. Ballast in the bulb leads to slow opening and fast closure of the valve. Maximum bulb temperature is 120° C.

Adsorption charges

These charges feature control characteristics much like MOP charges but avoid the difficulties of cross-ambient interference. Response time is slow but perfectly suitable for common refrigeration systems. Maximum bulb temperature is 130° C.

MOP (Maximum Operating Pressure)

MOP functionality is somewhat similar to the application of a crankcase pressure regulator. Evaporator pressures are limited to a maximum value to protect compressor from overload conditions.

MOP selection should be within maximum allowed low pressure rating of the compressor and should be at approximately 3K above evaporating temperatures.

Practical hint: Superheat adjustments influence the MOP:

Increase of superheat: Decrease of MOP
Decrease of superheat: Increase of MOP

Static superheat

ALCO Thermo®-Expansion valves are factory preset for optimum superheat settings. This setting should be modified only if absolutely necessary. The readjustment should be at the lowest expected evaporating temperature.

Subcooling

Subcooling generally increases the capacity of refrigeration system and may be accounted for when dimensioning an expansion valve by applying the correction factor K_c . The capacity corrections for evaporating temperature, condensing temperature and subcooling are all incorporated in K_c . These are in particular the liquid density upstream from the expansion valve, the different enthalpies of liquid and vapour phase refrigerants as well as certain part of flash gas after expansion. The percentage of flash gas differs with various refrigerants and depends on system conditions.

Heavy subcooling results in very small flash gas amounts and therefore increases expansion valve capacities. These conditions are not covered by K_c . Likewise, small flash gas amounts lead to reduced evaporator capacities and may result in substantial discrepancies between the capacities of the Thermo®-expansion valve and the evaporator. These effects must be considered during component selection when designing refrigeration circuits. In cases when subcooling exceeds 15 K, sizing of components (K_c , $K_{\Delta p}$) should be modified accordingly. The field practice indicates the following correction factors can be used to compensate the effect of the subcooling (liquid hammering) in addition to the use of correction factors K_c and $K_{\Delta p}$.

Subcooling	20K	30K	40K	50K	60K
Correction factor	0,8	0,7	0,6	0,5	0,4

ALCO CONTROLS will be happy to assist you. Please contact application engineering department.

Dimensioning

To correctly select a Thermo®-Expansion valve on a system, the following design conditions must be available:

- Cooling capacity Q_o
- Effective pressure differential across Thermo®-Expansion valve Δp
- Evaporating temperature/pressure
- Lowest possible condensing temperature/pressure
- Liquid temperature
- Type of refrigerant

As opposed to single substances (e.g. R22, R134a etc.) where the phase change takes place at a constant temperature/pressure, the evaporation and condensation of **zeotropic blend R407C** is in a gliding form (e.g. at a constant pressure the temperature varies within a certain range) through evaporators and condensers.

The evaporating/condensing pressure must be determined at saturated temperatures (bubble/dew points) for dimensioning of Thermo®-Expansion valves.

To facilitate **valve dimensioning** for other than the standard conditions ALCO offers an Excel based **Selection Tool**. This can be ordered from all Emerson sales offices. See www.emersonclimate.eu for contact addresses, email or phone numbers.

Example

Cooling capacity of a system: 18 kW
 Refrigerant: R 407C
 Condensing temperature (saturated liquid): +35°C
 (Condensing pressure will be 15.5 bar)
 See appendix page 153 for
 Evaporating temperature (saturated vapour): 0°C
 (Evaporating pressure will be 4.61 bar)
 Subcooling: 1 K
 Pressure drops through liquid line: 2.2 bar
 Pressure drops through evaporator: 0.3 bar
 Required type of Thermo®-Expansion valve: T-series

To calculate the nominal capacity the following formula has to be used:

$$\text{Cooling capacity} \times K_t \times K_{\Delta p} = \text{Nominal capacity}$$

1. Selected **K_t-factor** according to refrigerant, liquid and evaporating temperature from table on page 76.

$$K_t = 0.98 \text{ (for this example)}$$

2. Determine pressure differential across the Thermo®-Expansion valve using condensing pressure, subtract evaporating pressure and all other possible pressure losses (pressure drops in evaporator, drier, solenoid valve, liquid distribution...).

For this example:

$$\Delta p = 15.5 - (4.61 + 2.2 + 0.3) = 8.39 \text{ bar}$$

Select **K_{Δp}** factor from table on page 76:

$$K_{\Delta p} = 1.15 \text{ (for this example)}$$

3. Multiply cooling capacity with **K_t** and **K_{Δp}**, to find nominal capacity for Thermo®-Expansion valve.

$$Q_n = 18 \times 0.98 \times 1.15 = 20.29 \text{ kW}$$

Select Thermo®-Expansion Valve from table on page 72: TCLE 550 NW (for this example).

Please note that all evaporating/condensing temperatures in this catalogue are based on saturated vapour/liquid temperatures.

Selection Guide for Expansion Valves

Series	Selection Criteria				Catalogue Page
	Capacity Range kW (R 404A)	Evaporating Temperature Range °C	Main Application	Features	
TI	0,5 to 14,2	+20 to -45	Refrig./Air-Cond. Heat Pumps	Interchangeable Orifices	66
TX3	0,8 to 15,0	+20 to -45	Refrig./Air-Cond. Heat Pumps	Hermetic, Superheat adjustable, optional with check valve	72
TX6	13.3 to 57.0	+20 to -45	Air-Cond. Heat Pumps	Hermetic Superheat adjustable	74
T	2 to 209	+30 to -45	Refrig./Air-Cond. Heat Pumps	Interchangeable Orifices, Power-Assembly and Flange	76
ZZ	1,9 to 81,2	-45 to -120	Low Temperature Application	Interchangeable Orifices, Power-Assembly and Flange	81
L	2 to 154	+30 to -50	Liquid Injection Superheat Control	Interchangeable Orifices, Power-Assembly and Flange	84
935	5,2 to 43,5	+30 to -45	Liquid Injection Temperature Control	Interchangeable Orifices, Power-Assembly and Flange	86

* Please ask your local Emerson sales office for datasheets or download from www.emersonclimate.eu

Thermo®-Expansion Valves Series TI

new valve design, exchangeable Orifices

Features

- Laser welded diaphragm with large diameter for high reliability and maximum life time
- Constant superheat across wide application ranges
- Easy and precise superheat setting by modified threads
- TILE with stainless steel fittings allow brazing without wet rags
- With capacities between 0.4 kW and 14.2 kW (R 404A) ideally suited for service work
- Internal or external equaliser
- Brazing and flare connections available
- Capillary tube length 1.5 m
- PS: 45 bar, TS: -45 ... +75°C
- No CE marking according art. 3.3 PED 97/23 EC

Quick Selection Tables

Published capacity data at 1 K subcooling at the inlet of the expansion valve and 1.5 bar pressure drop in the refrigeration system. For proper valve selection especially in case of high pressure drops, we recommend the use of correction factors (see page 74).

To facilitate valve dimensioning for other than the standard conditions ALCO offers an Excel based **Selection Tool** (www.emersonclimate.eu).

Thermo®-Expansion Valve Series TX3

for OEM use, hermetic Design

Features

- Hermetic design with solder connections
- Internal or external equalizer
- External superheat adjustment
- Large diaphragm eliminates disturbances to the valve and provides smoother valve control
- Very compact size
- Version with internal check valve eliminates external check valve for heat pump applications
- Capillary tube length 1,5m
- PS: 45bar, TS: -45 ... +120°C
- Packaging units with 24 pieces, no single packs

TX3

MOP

MOP (bar)	Upper limit of Evaporating Temperature Range					
	R 134a	R 22	R 407C	R 404A	R 410A	R 507
2.3				-18°C		-18.7°C
3.3	+11°C					
6.4		+13°C	+14.5°C			
12.9					+17°C	

Pressures are given in gauge pressure.

Thermo®-Expansion Valve Series TX6

Hermetic Design

Features

- Balanced port design for constant superheat operation over a wide application range under variation of condensing pressure
- Hermetic monobloc design with solder connections for minimal leakage
- Large diaphragm eliminates disturbances to the valve and provides smoother and consistent valve control
- Tailored charges for different applications
- External equalizer
- External superheat adjustment
- PS: TX6-H/N/M/Sxx : 31bar, TX6-Zxx: 42bar
- TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

Thermo®-Expansion Valve Series T

Exchangeable Power Assemblies and Orifices

Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to double seat orifice design (TJRE, TERE, TIRE & THRE)
- Biflow capability for applications in heat pumps
- Capillary tube length 1.5 m (TCLE, TJRE) and 3m (TERE, TIRE & THRE)
- PS: 31 bar, TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

Valve selection for operating conditions
other than nominal conditions:

Alternatively download the Excel based ALCO
Selection Tool from www.emersonclimate.eu.

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

Q_n : Nominal valve capacity

K_t : Correction factor for evaporating and liquid temperature

Q_o : Required cooling capacity

$K_{\Delta p}$: Correction factor for pressure drop at valve

Thermo®-Expansion Valve Series ZZ

for Low Evaporating Temperatures between -45 and -120°C

Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Capillary tube length 3 m
- PS: 31 bar, TS: -120 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

ZZCE

Type Code

Type Code

Available upon special request:

- Power assembly with solder connection for external pressure equalization
- Non-standard MOPs
- Non-standard charges
- Non-standard connection sizes (Selection see page 86)

Correction Tables for Series ZZ

Valve selection for operating conditions other than specified on page 77:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

Q_n : Nominal valve capacity

Q_o : Required cooling capacity

K_t : Correction factor for evaporating and liquid temperature

$K_{\Delta p}$: Correction factor for pressure drop at valve

Liquid Injection Valve Series L

Exchangeable Power Assemblies and Orifices

Features

- Applications for Series L valves include superheat control (desuperheating of suction gas i.e. in hotgas bypass systems and interstage cooling in multiple stage compressors)
- Modular design for economical logistics and easy assembly and servicing
- Very good stability is attained because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to seat orifice design (LJRE, LERE & LIRE)
- Capillary tube length 3 m
- PS: 31 bar, TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC

Correction Tables for Series L**Valve selection for desuperheating of suction gas:**

The required desuperheating capacity Q_{des} has to be multiplied with the correction factors on page 74.

$$Q_{des} \times K_t \times K_{\Delta p} = Q_n$$

Q_{des} : Required desuperheating capacity
 K_t : Correction factor for evaporating and liquid temperature
 $K_{\Delta p}$: Correction factor for pressure drop at valve
 Q_n : Nominal valve capacity

Valve selection for desuperheating of suction gas in conjunction with hotgas-bypass regulation:

The required bypass capacity Q_{byp} has to be multiplied with correction factor K_{ti} per table below.

$$Q_{byp} \times K_{ti} = Q_n$$

Q_{byp} : Required bypass capacity
 K_{ti} : Correction factor for evaporating temperature
 Q_n : Nominal valve capacity

Correction factors based on 20K superheat suction gas at the inlet of compressor, discharge temperature 28K above isentropic compression and 1K subcooling.

Liquid Injection Valves Series 935

Exchangeable Power Assemblies and Orifices

Applications

- Series 935 valves are applied as temperature controls. Applications include:
 - Desuperheating of discharge gas on compressors. In this case bulbs are mounted on the high pressure outlet of the compressor
 - Control of compressor oil temperatures
- Series 935 valves shall not be used to control superheat

Features

- Modular design for economical logistics and easy assembly and servicing
- Very good stability because of the large forces generated by the large diaphragm diameter
- High quality materials and processes for high reliability and long lifetime
- Combinations of different charges with various orifice springs cover a very large application range
- PS: 31 bar, TS: -45 ... +65°C
- No CE marking according art. 3.3 PED 97/23 EC
- Non-standard connection sizes see page 86

Correction Tables for Series 935

Valve selection for operating conditions other than nominal conditions:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

Q_n : Nominal valve capacity

Q_o : Required cooling or desuperheating capacity

K_t : Correction factor for evaporating and liquid temperature

$K_{\Delta p}$: Correction factor for pressure drop at valve

Solenoid Valves

2-Way Solenoid Valves

Basic Terms and Technical Information

Operating principles

Directly actuated: The magnetic field of the solenoid coil forces a movement of the plunger and thus causes the opening of the valve seat.

Servo actuated: The magnetic field of the solenoid coil is only utilized for the opening of the pilot valve seat. The necessary energy to actuate the piston or diaphragm of the main valve seat is provided by the refrigerant flow and results in a certain pressure drop.

Minimum pressure drop

Directly actuated solenoid valves do not require a minimum pressure drop for proper operation. Servo operated solenoid valves require a minimum pressure drop of approximately 0.05 bar to remain fully open. In case of insufficient refrigerant flow this value will not be reached and the solenoid valve may close unintentionally. These closures may lead to malfunctions and oscillations in the refrigeration circuit. Improper sizing of solenoid valves (i.e. use of excessively large solenoid valves) is the main cause of this effect. This is particularly important in capacity controlled refrigeration circuits.

Therefore the decisive factor for proper solenoid valve sizing is the respective capacity of the valve and not its connection size.

Formula for calculating the actual pressure drop of a solenoid valve:

Δ_{p1} = Δ_{p2} × (Q_{n1}/Q_{n2})²

- Δ_{p1}: Actual pressure drop
- Δ_{p2}: Nominal pressure drop at Q_{n1}
- Q_{n1}: Calculated nominal capacity
- Q_{n2}: Nominal capacity of selected valve

Maximum Operating Pressure Differential (MOPD)

MOPD is the maximum pressure differential between inlet and outlet of the solenoid valve which permits proper opening of the valve. When used with ALCO AC solenoid coils all ALCO solenoid valves employ 25 bar MOPD.

Operation in conjunction with DC solenoid coils lead to reduced MOPD values depending on valve type and size.

The **DS2 Chopper Plugs** allow the use of 24VAC coils with 24VDC by converting the DC in an AC voltage. Please contact ALCO application engineering for additional details.

Correction Tables for the Selection of Solenoid Valves

For use with 110 RB, 200 RB, 240 RA and 540 RA Series

Valve selection for operating conditions other than nominal:

The pressure drop can be calculated with the following formula:

$$Q_n = Q_o \times K_t \times K_{\Delta p}$$

$$\Delta P_o = \Delta P_n \times \frac{Q_o^2}{Q_n^2}$$

Q_n : Nominal valve capacity
 K_t : Correction factor for evaporating and liquid temperature
 $K_{\Delta p}$: Correction factor for pressure drop at valve
 Q_o : Required cooling capacity

$\Delta P_n = 0,15 \text{ bar}$

ΔP_n : Pressure drop under nominal conditions

3-Way Solenoid Valves Series M36

Features

- For heat reclaim application
- Pilot connection to suction line required, no minimum pressure drop
- Compact size
- Snap-on clip for attaching solenoid coils
- No disassembly necessary for brazing
- Max. working pressure PS: 35 bar

Options:

- Actuation coil and cable assemblies available for various voltages, see page 93

M36-118 M36-078 with ASC Coil and DS2 Chopper Plug

M36-118	801 421		1-1/8					

Nominal capacities at +38°C condensing temperature, +4°C evaporating temperature (saturated pressures / dew point), 0.15 bar pressure drop between valve inlet and outlet.

For other operating conditions multiply required capacity Q_o with correction factors K_t and K_{Δp}.

$$Q_o \times K_t \times K_{\Delta p} = Q_n$$

Q_o: Required cooling capacity
 K_t: Correction factor for evaporating and liquid temperature
 K_{Δp}: Correction factor for pressure drop at valve
 Q_n: Nominal valve capacity

Mechanical Pressure Regulators

Pressure Regulators

Basic Terms and Technical Information

Capacity regulators

Regulator series ACP and CPHE are hot gas bypass regulators and serve the purpose of compensating excess compressor capacity. Thus they prevent the generation of evaporator pressures below predetermined levels. In case of hot gas injection into the suction line, a liquid injection valve in conjunction with a solenoid valve is required to desuperheat the excessively hot suction gas. The capacity should not be reduced below 60 % of maximum in this application to avoid oil return problems. With hot gas injection at the evaporator inlet, no liquid injection valve is necessary. The injection must be such that the incremental gas volume is taken into account. No problems with oil return should be expected even when regulating 100% of capacity.

Condensing pressure regulators

The HP series regulator are designed to keep condensing pressures above certain levels in case of low ambient temperatures. Thus they ensure sufficient pressure at the inlet port of the expansion valve and permit trouble free start-up of the refrigerant circuit independent of ambient temperatures. This kind of refrigeration circuit design is “flooding the condenser” at low ambient conditions and therefore requires increased receiver capacity.

Evaporator pressure regulators

Series PRE regulators serve the purpose of maintaining evaporator pressure above certain predetermined levels. The most important application is the use of several evaporators with different evaporating temperatures in conjunction with a common suction line. The freezing of water in water chillers and air-conditioning systems can be safely prevented if evaporating temperatures are kept above 0°C, even when loads are greatly reduced.

Crankcase pressure regulators

Series PRC regulators serve the purpose of preventing excessively high suction pressures to protect compressor motors from overloading. Excessively high suction pressures can occur at start-up of a refrigeration circuit in case of high loads and after defrost. Crankcase regulators are adjusted to the maximum allowed suction pressure rating of the compressors as given by the compressor manufacturers.

*) Nominal capacities at +38°C condensing temperature, +4°C evaporating temperature (saturated temperatures / dew point) and 1 K liquid subcooling at the inlet of the expansion valve.

Hot Gas Bypass Regulators Series CPHE

Features

- High quality materials and processes for high reliability and long lifetime
- Superior partial load performance due to double seat orifice design (CPHE-3 to CPHE-6)
- Modular design for economical logistics and easy assembly and servicing
- External equalization

Specific connection sizes and flanges available on request. Selection see page 86.

Pressure Controls and Thermostats

Pressure Controls

Basic Terms and Technical Information

Characteristics

Pressure controls serve various functions, which may be divided into control and protection functions. Examples for control functions are compressor cycling, pump-down or defrost control. Protection functions include, pressure limiting and cut out against excessive pressures, against loss of charge or for freeze protection.

These functions are performed by operating a set of electrical contacts when exceeding a preset lower or upper pressure limit. Depending on whether they are type tested (TÜV approved) or not they may be referred to by the following terms:

without TÜV approval:	Pressure Control
with TÜV approval:	Pressure Limiter, Pressure Cut Out or Safety Pressure Cut Out

Pressure controls with TÜV approval are tested according to EN 12263 as required by DIN 8901 and EN 378.

1. Pressure controls (without TÜV approval)

Pressure controls without type approval may either be of the automatic or manual reset type. Manual reset versions are available for decreasing (manual reset min.) or increasing pressure (manual reset max.)

2. Pressure limiters PSL/PSH

Pressure limiters are of the automatic reset type. Limiters for high pressure applications have a double bellows design to act as fail-safe controls.

3. Pressure cut outs PZH/PZL

Pressure cut outs are of the manual reset type where reset is possible from the outside of the control without the need for a tool (external reset). Cut outs for high pressure applications have a double bellows design to act as fail-safe controls.

4. Safety pressure cut outs PZHH/PZLL

Pressure cut outs are of the manual reset type where the reset requires the use of a tool. Typically, the removal of a cover is required in order to press the reset button (internal reset). Cut outs for high pressure applications have a double bellows design to act as fail-safe controls.

Adjustment of switching points

A pressure gauge should always be used for comparison when adjusting the switching points on pressure controls. The setting scale on the device is intended to serve for orientation, showing the setting range of the upper switching point p_{max} in bar/psig and the value of the pressure differential Δp as difference between upper switching point p_{max} and the lower switching point p_{min} . The upper switching point p_{max} has to be adjusted on the scale, whereas the lower switching point p_{min} is given by adjustment of the desired switching differential Δp .

The formula is:

$$\text{Upper switching point} - \text{Differential} = \text{Lower switching point}$$

$$P_{max} - \Delta p = P_{min}$$

Function of contacts SPDT

On pressure rise above setting 1-2 opens and 1-4 closes. On pressure drop below setting 1-2 closes and 1-4 opens.

SPDT with manual reset max.

On pressure rise above setting 1-2 opens and 1-4 closes and latches. The device can be manually reset when the pressure has dropped below setting.

SPDT with manual reset min.

On pressure drop below setting 1-2 closes, 1-4 opens and latches. The device can be manually reset when the pressure has risen above setting.

Unit of pressure

All pressures are given in gauge pressure

$$P_{absolute} = P_{gauge} + 1 \text{ bar}$$

$$1 \text{ bar} = 100 \text{ kPa}$$

$$1 \text{ bar} = 14.5 \text{ psi}$$

Pulsation damping

All high pressure controls with A-connection ($7/16$ -20UNF, $1/4$ " SAE male) are equipped with a snubber to protect the pressure element from pulsations.

Standards and Regulations

BGV D4 (VBG20)	Accident prevention regulations for refrigeration plant.
DIN 8901	Heat pumps with fluorocarbon refrigerants. Protection of soil, underground and surface water.
EN 60947-1/ EN 60947-5-1	Specifications for low-voltage switchgear.
EN 378	Refrigerating systems and heat pumps - Safety and environmental requirements.
EN 12263:	Refrigerating systems and heat pumps - Safety switching devices for limiting the pressure requirements and tests.

Selection Guide for Pressure Controls

Series	Selection Criteria						Catalogue Page
	Design	Number of Contacts (SPDT)	Adjustable	Protection DIN 40050 IEC 529	Rated Operational Current at 230 V AC		
					Inductive Amp. AC 15	Motor Rating UL	
PS1	Standard Model	1	yes	IP 44	10 A	24 A	106
PS2	Dual Pressure Switch	1 + 1	yes	IP 44	10 A	24 A	108
PS3	Pressure Switch Standard-Types	1	Factory set to fixed values	IP 30 / IP 65	3 A	6 A	110
PS3	Pressure Switch OEM-Types	1	Fixed values acc. to customer spec. depending on volume	IP 30 / IP 65	3 A	6 A	112
FD 113	Differential Pressure Switch	1	yes pressure diff. + time delay	IP 30	3 A / 6 A	—	113

Pressure Controls Series PS1 / PS2

Features

- Adjustable pressure range
- Automatic and manual reset versions
- Flare and solder connections
- Shatter resistant contacts
- High operational current, locked rotor max. 144 Amps (LRA)
- Standard SPDT with same operational current rating for both contacts
- Dual pressostat with two separate SPDT for high and low pressure side
- Including sealable blocking plate and mounting screws

Options

- Convertible reset to reduce stock
- Further pressure connections
- Factory set to customer specification

PS1

PS2

Standards

- per Low Voltage Directive
- per PED Directive 97/23 EG, TÜV appr. versions only
- Manufactured and tested to standards on our own responsibility
- US LISTED Underwriter Laboratories
- German Lloyd for use on ships, when equipped with marine-type cable gland

Pressure Controls Series PS3 / Standard types

Compact Pressure Switch with fixed switch-point settings

Features

- **Maximum operating pressure up to 43 bar / test pressure up to 48 bar**
- Standard factory settings from stock in small volumes
- High and low pressure switches
- High temperature version with snubber for direct compressor mounting (range 6)
- Direct mounting reduces the number of joints and thus avoiding potential leakage
- Precise setting and repeatability
- IP 65 protection if used with PS3-Nxx and PS3-Lxx cables with plug (acc. EN 175301-803), no additional gasket required (molded into plug)
- Cables with plug to be ordered separately

Standards

-  per Low Voltage Directive
-  per PED Directive 97/23 EG, TÜV appr. versions only
- Manufactured and tested to  standards on our own responsibility
-  **US LISTED** Underwriter Laboratories

Pressure Controls Series PS3 / Special types

For OEM use with settings according to customer's specification, minimum order quantity 100 pcs.

Features

- **Maximum Operating Pressure up to 43 bar / Test Pressure up to 48 bar**
- For direct mounting on a pressure connection (free standing) or with a capillary tube
- Direct mounting reduces the number of joints and thus avoiding potential leakage
- Direct mounting saves cost for flexible hose and additional fittings
- Precise setting and repeatability
- High temperature version with snubber, for direct compressor mounting (range 6)
- Micro switch for narrow pressure differentials
- Gold plated contacts for low voltage / current applications
- Worldwide approvals
- Easy mounting

Options

- Low pressure switch with automatic or manual reset
- High pressure switch with automatic or manual reset, standard or high temperature version
- Pressure limiter PSH - standard or high temperature version
- Pressure cut-out PZH - external reset, standard or high temperature version
- Safety pressure cut-out PZHH - internal reset, standard or high temperature version

Electrical connections (optional)

- Cables with plug in lengths of 1.5m, 3.0m and 6.0m available. No additional gasket required.
- Appliance socket DIN 43650

Type of contacts (optional)

- Standard (SPDT)
- Micro switch (SPDT)
- Gold plated contacts upon request

Standards

- per Low Voltage Directive
- per PED Directive 97/23 EG, TÜV appr. versions only
- Manufactured and tested to standards on our own responsibility
- US LISTED Underwriter Laboratories

Pressure connections

- S: $\frac{7}{16}$ "-20UNF, female with Schrader opener and snubber (snubber only with high temperature diaphragm)
- A: $\frac{7}{16}$ "-20UNF, $\frac{1}{4}$ " SAE male
- U: 6 mm solder, 80 mm length, ODF
- X: $\frac{1}{4}$ " solder, 80 mm length, ODF
- K: 1 m capillary tube with $\frac{1}{4}$ " SAE flare nut and Schrader opener
- L: 1 m capillary tube and $\frac{1}{4}$ " ODM solder connector

Installation

- Depending on pressure connection, free-standing or with console.

Differential Pressure Controls Series FD 113

Features

- Immediate reset (no cooling down period)
- Precise timing
- Adjustable time delay from 20 to 150 sec (ZU types)
- Separate output signals for operation and alarm
- Suitable for supply voltage 24 to 240 V AC / V DC
- Pressure connection: Flare $\frac{7}{16}$ "-20 UNF, $\frac{1}{4}$ " SAE male

Standards

-  per Low Voltage Directive
- Manufactured and tested to  standards on our own responsibility

Thermostats

Basic Terms and Technical Information

Characteristics

ALCO thermostats are electric circuit control devices which open or close an electric contact depending on temperature changes at the bulb.

Description of bulb charges

The application range of thermostats is mainly determined by the charge. Accordingly various bulb shapes and sizes are necessary.

- Vapour charge, bulb type A, E, P**
The thermosystem is filled with a medium in vapour phase. A thermostat with vapour charge operates in accordance with temperature changes at the bulb as long as the bulb is the coldest part in the whole system (bellows, capillary tube, bulb). ALCO thermostats are equipped with a bellows heater (82 k Ohm, 230 V) to avoid such conditions. On applications with low current the bellows heater has to be removed. Max. bulb temperature is 150°C (70°C for bulb type E). Response time is very fast.
- Liquid charge**
Bulb type C: Bulb must be warmer than capillary tube and bellow (i.e. for heating purpose). Max. bulb temperature is 210°C. Response time is fast.
- Adsorption charge, bulb type F**
This charge only reacts on temperature changes at the bulb. Max. bulb temperature is 100°C. Response time is slow but perfectly suitable for common refrigeration systems.

Adjustment of switching points

A thermometer should always be used for comparison when adjusting the switching points on temperature controls. The setting scale on the device is intended to serve for orientation, showing the setting range of the upper switching point t_{max} in °C and °F and the value of the temperature differential Δt in K as difference between the upper switching point t_{max} and the lower switching point t_{min} . The upper switching point t_{max} has to be adjusted on the scale, whereas the lower switching point t_{min} is given by adjustment of the desired switching differential Δt . The formula is:

Upper switching point – Differential = Lower switching point

$t_{max} - \Delta t = t_{min}$

Important!

The differential Δt mentioned on the differential scale and in the technical data refers to the upper part of the setting range and the upper switching point. In the lower part of the setting range an increase of the differential Δt can be expected. The lowest possible lower switching point t_{min} is mentioned in the selection tables and is helpful to select switching points with large differentials Δt in the lower temperature range.

Bulb Sizes

A	E	P	C	F
				
Vapour 2m, capillary with bulb	Vapour coil, 0m	Vapour 2m, capillary with function C and D 6m	Liquid 2m, capillary with bulb	Adsorption 2m, capillary with bulb

Function of contacts

SPDT

- On temperature rise above setting 1-2 opens and 1-4 closes.
- On temperature drop below setting 1-2 closes and 1-4 opens.

SPDT with manual reset min.

- On temperature drop below setting 1-2 closes, 1-4 opens and latches.
- The device can be manually reset when the temperature has risen at least 2K above setting.

SPDT with manual reset max.

- On temperature rise above setting 1-2 opens and 1-4 closes and latches.
- The device can be manually reset when the temperature has dropped 2K below setting.

SPDT with off switch AUTOmatic - STOP

SPDT with bellows heater includes a 82 k Ohm, 230 V AC/DC resistor

Standards and regulations

Important for the installation of thermostats:

EN 60730-2-9 Specification for temperature controls and temperature cut-outs.

EN 60947-1/ Specifications for low-voltage
EN 60947-5-1 switchgear.

EN 378: Refrigerating systems and heat-pumps. Safety and environmental requirements.

Thermostats Series TS1

Features

- Adjustable temperatures and differentials
- Shatter resistant contacts
- High operational current, locked rotor max. 144 Amps (LRA)
- Standard SPDT with same operational current rating for both contacts
- Captive terminal and cover screws
- Range and differential individually lockable

Technical Data

Type of Contacts	1 SPDT
Inductive Amp. (AC15)	10 A / 230 V AC
Inductive Amp. (DC13)	0.1 A / 230 V DC
Heating load (AC1)	24 A / 230 V AC
Motor Rating, Full Load Amp.	24 A / 120/240V AC
Motor Rating, Locked Rotor Amp.	144 A / 120/240V AC
Ambient Temperature Range	-50°C to +70°C
Vibration Resistance (10 to 1000 Hz)	4 g
Cable Entry	Grommet PG 16
Protection acc. to	IP 44 (IP 30 with Selector Switch)
DIN 40050 / IEC 529	
Bellows Heater at Vapour Charge	82 K Ohm, 230 V AC / DC (12 and 24 V DC upon request)

System Protectors, Moisture Indicators

Filter Driers

Basic Terminology and Technical Information

Function

The purpose of filter driers is to keep the refrigeration circuit clean of water, acid and solid contaminants. In case of contamination, corrosion and ice building can occur, as well as malfunction of the compressor.

Property of desiccants

Molecular sieves

This kind of desiccant has a very good drying effect independent of the oil content of the refrigerant. Molecular sieve is a fast acting desiccant and will remove moisture even when the water content of the refrigerant is low and when the temperature of the liquid refrigerant is high.

Activated alumina

Activated alumina incorporate an excellent acid capacity.

By selecting a specific mixture of both desiccants an optimum effect can be achieved to cover the requirements of all kinds of applications. Liquid filter driers are especially designed for a high water capacity whereas suction line filter driers feature a high acid and filtration capacity.

Flow capacity

Flow capacity refers to ARI-Standard 710-86 and DIN 8949 and is based on a pressure drop of 0.07 bar, +30°C liquid temperature and -15°C evaporating temperature for common refrigerants.

The flow capacities are given at two levels of pressure drop: 0.07 and 0.14 bar.

For Filter drier selection under other operating conditions use the correction factors on page 129.

Water capacity

The water capacity for R 22 refers to ARI 710-86 and DIN8948 is based on a liquid temperature of 24/52°C and an equilibrium point dryness (EPD) of 60 PPM water in refrigerant. The EPD for other refrigerants according to DIN 8949 is as follows:

Refrigerant	EPD (PPM)
R 134a	50
R 407C	50
R 404A	50
R 507	50
R 410A	50

Bi-flow Filter Driers Series BFK

hermetic design, for liquid refrigerants

Features

- Solid block style
- Integrated check valves insure Bi-flow capability, eliminate the need for external check valves and reduce the external piping
- ODF Copper fittings for easy soldering
- Pattern flow for non-turbulent performance
- High water, acid adsorption capacity
- Temperature range TS: -40°C to +65°C
- Max. operating pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive
-  **US LISTED** Underwriter Laboratories

The rated flow capacities are in accordance with ARI standard 710-86 and DIN 8949 at +30°C liquid temperature and -15°C evaporating temperature.

Selection method for other conditions:

1. Determine the correction factor (page 129) based on type of refrigerant, liquid and evaporating temperature.
2. Multiply the correction factor by cooling capacity or heating capacity whatever is more.
3. Select the filter drier according to determined capacity corresponding to flow capacity at 0.07 bar pressure drop.

Filter Driers Series ADK

Hermetic Design, for Liquid Refrigerants

Features

- Robust block with optimum blend of molecular sieve and activated alumina
- ODF Copper fittings for easy soldering
- High water and acid capacity
- Filtration down to 20 micron
- Temperature range TS: -40°C to +65°C
- Max. working pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

Nominal Operating Conditions

Nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R 744	-40°C	-10°C
R 22, R 134a, R 404A, R 407C, R 410A, R 507	-15°C	+30°C

Correction factors for other than the nominal conditions see page 129.

Filter Driers Series FDB

Hermetic design, bead style, for liquid refrigerants

Features

- Compacted bead style (spring loaded)
- Optimum blend of molecular sieve and activated alumina combined with high filtration capacity
- Final filtration 20 micron
- Filtration first for more effective use of surface area of desiccant
- High water and acid capacity
- Cushioned flow for non-turbulent performance
- ODF Copper fittings for easy soldering
- Rugged steel shells
- Corrosion resistant epoxy paint
- Temperature range TS: -40°C to +65°C
- Max. working pressure PS: 45 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive
-  US LISTED Underwriter Laboratories

Nominal Operating Conditions

Nominal capacity is based on the following conditions:

Refrigerant	Evaporating temperature	Liquid temperature
R 22, R 134a, R 404A, R 407C, R 410A, R 507	-15°C	+30°C

Correction factors for other than the nominal conditions see page 129.

Filter Drier Shells Series ADKS-Plus

for Liquid- and Suction Applications with Replaceable Cores

Features

- Rustproof Aluminum flange cover with notch hole for ease of mounting
- ODF Copper fittings for easy soldering
- Rigid core holder from steel (no plastic)
- Service friendly core holder and flange cover
- Optimum flow capacity at low pressure drop
- Temperature range TS: -45°C to +65°C
- Max. working pressure PS:
34,5 bar (-10°C to +65°C)
25,9 bar (-45°C to -10°C)
- CE marking according PED 97/23 EC
-  US LISTED Underwriter Laboratories

Filter-Drier Shells With Quick-Cap Series FDS-24

for Liquid- and Suction Applications with Replaceable Cores

Features

- Quick-cap flange (one bolt) design makes replacing of cores in a matter of seconds
- Ideal for retrofit, reducing installation / material cost
- Ideal for refrigerant recovery / reclaim units with regular change of filter-drier
- Compatible with CFC, HCFC and HFC refrigerants
- Free volume as a receiver in FDS-24... (580 cm³)
- ODF Copper fittings for easy soldering
- Corrosion resistant powder painting of shell body
- Temperature range TS: -45°C to +65°C
- Max. working pressure PS:
34,5 bar (-10°C to +65°C)
25,9 bar (-45°C to -10°C)
- No CE marking according art.3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

Suction Line Filters and Filter Driers Series ASF and ASD

Hermetic design

Features

- Minimum pressure drop due to internal construction and compacted bead style
- Service friendly with 2 Schrader valves for pressure drop measurement
- ODF Copper fittings for easy soldering
- Filtration down to 10 micron
- Temperature range TS: -45°C to +50°C
- Max. operating pressure PS: 27,5 bar
- No CE marking according art. 3.3 PED 97/23 EC
- HP marking according to German Pressurized Vessel Directive

Suction Line Filter and Filter Drier Shells Series BTAS

for replaceable Filters and Filter Drier Cores

Features

- Corrosion resistant brass body ideal for suction line applications
- Extremely large filtration area for optimum flow capacity
- Low pressure drop
- Filtration down to 10 micron
- Temperature range TS: -45°C ... +50°C
- Max. working pressure PS: 24 bar

Moisture Liquid Indicators Series MIA

Features

- Fully hermetic
- Corrosion free stainless steel body
- Crystal Indicator element for long lifetime and reliability
- Indication of dryness according to ASERCOM recommendation
- Easy determination of moisture content
- Sensitive indicator with calibrated four colours
- Large clear viewing area
- Lightweight (only 60g MIA-M06/014)
- ODF extended tube configurations suitable for all commercial applications
- For R22, R407C, R134a, R404A, R507 and R410A together with Mineral- and POE oils
- Max. operating pressure PS: 45 bar
- UL certified for Canada, see SA 4876 (except MIA-078)

Moisture Liquid Indicators Series AMI

Features

- First choice for R 134a, R 22, R 404A, R 407C, R 507 and polyolester lubricants
- High accuracy of moisture indication according to ASERCOM recommendation
- Fused glass - no leakage
- Long lifetime of indicators by utilization of crystals
- Indicator with high resistance against acid and water
- Wide angle view for exact distinction of vapour and liquid
- Max. operating pressure PS: 31 bar

Oil Management Components

Oil Management Components

Technical Information

Refrigeration compressors are lubricated by refrigeration oil that circulates from the compressor crankcase or housing. As refrigerant gas is discharged by the compressor, it will leave with a fine oil mist, that will be circulated throughout the entire system.

Small amounts of oil circulating through the system will not affect the system performance. Too much refrigeration oil circulating in the system will have adverse effects on the components in the system. Circulating oil reduces the ability of the system to effectively remove the heat. Condensers, evaporators and other heat exchangers lose efficiency when coated internally with an oil film.

Refrigeration oil not returning to the compressor causes improper lubrication and eventual compressor failure. At low temperature application, refrigeration oil thickness becomes difficult to move, causing oil to be trapped in the system.

Oil separator function

Refrigerant gas leaving the compressor through the discharge line contains refrigeration oil in a vaporous mist. As this mixture enters the oil separator, the velocity is reduced to allow oil separation to begin.

The refrigerant gas and oil mixture enters the oil separator and passes through an inlet screen, causing the fine particles to combine. Larger oil particles are formed and drop to the bottom of the oil separator.

The refrigerant gas then passes through an outlet screen to remove residual oil particles. The oil gathers in the bottom of the oil separator until a float operated needle valve opens to allow the return of oil to the compressor. Oil returns quickly to the compressor, because of the higher pressure in the oil separator than in the compressor crankcase. When the oil level has lowered, the needle valve retracts to prevent refrigerant gas from returning back to the compressor. The refrigerant gas leaves through the outlet of the oil separator and goes to the condenser.

Oil level management system function

This system provides oil level balancing as well as oil level monitoring including alarm and compressor shut-down functions. The oil level is measured inside the compressor's crankcase. By operating an integrated solenoid valve, missing oil can be fed from the oil receiver or from the oil separator directly into the compressor sump. If oil level drops to a dangerous level the alarm contact changes into alarm state. The alarm contact may be used to shut down the compressor. The integrated electronics includes delay times in order to avoid short-cycling and nuisance alarms.

This system applies to compressor pack applications with multiple parallel compressor arrangements but also to stand-alone compressor applications for compressors without differential oil pressure monitoring.

Electronic Oil Level Management Systems OM3 / OM4

with alarm function and compressor shut down

Features

- **OM4 for high pressure refrigerants**
- IP65 rating due to molded housing and electrical connection with molded cable assemblies
- 3 Zone 100% level control by using precise Hall-sensor measurement
- Self contained unit with oil level sensor and integral solenoid to manage oil level supply
- SPDT output contact for compressor shut down or alarming, rating 230 VAC/3A
- Power supply 24 VAC, 50/60 Hz
- Alarm, status and 3 zone indication by LED's
- Easy installation by sightglass replacement and frontside installation without nuts
- Visual inspection of oil level still possible

OM3 / OM4 TRAXOIL

- Adapters suitable for various types of compressors
- Signal generated by gravity based float - not prone to errors by foaming or light like optical sensors
- Recommended by leading compressor manufacturers
- **CE** marking under Low Voltage and EMC Directive

Cable assemblies and Accessories see next page.

Cable Assemblies for OM3 / OM4

OM3-P30	805 151	Power Supply Cable 3.0m
OM3-P60	805 152	Power Supply Cable 6.0m
OM3-N30	805 141	Relay Cable 3.0m
OM3-N60	805 142	Relay Cable 6.0m

Accessories

ECT-323	804 424	Transformer 230 VAC / 24 VAC, 25 VA (supply of 1 pcs. OM3/OM4)
ECT-623	804 421	Transformer 230 VAC / 24 VAC, 60 VA (supply of 3 pcs. OM3/OM4)
ODP-33A	800 366	Differential oil check valve 3.5 bar, inlet: 15/16"-18 UNF female, outlet: 5/8"-18 UNF male

Ordering Information (Example)

Standard system requires the following parts:		
Type	Part No.	Description
OM3-CUA	805 030	Oil level system with flange adapter 3- / 4-hole
OM3-P30	805 151	Power Supply Cable 3.0m
OM3-N30	805 141	Relay Cable 3.0m
ECT-323	804 424	Transformer 230 VAC / 24 VAC, 25 VA
ODP-33A	800 366	Differential Oil Check Valve 3.5 bar

Technical Data

Supply voltage / current	24 V AC, 50/60 Hz / 0.7 A	Medium compatibility	HCFC, HFC, mineral, synthetic, and ester lubricants
Maximum working pressure PS	OM3: 31 bar, OM4: 45 bar	Orientation of base unit	horizontal
Solenoid valve MOPD	OM3: 21 bar, OM4: 24 bar	Level Control	40 to 60% of sightglass height
Medium temperature	-20 to 80°C	Protection class	IP 65 (IEC529/EN 60529)
Ambient temperature	-20 to 50°C	Solenoid Coil	ALCO ASC 24 VAC, 50/60 Hz: 8VA
Time delay filling	10 s	Weight	850 ... 930g (dep. on adapter)
Time delay alarm	20 s	Alarm contact	max. 3A, 230VAC, SPDT dry contact
Body material	Aluminum		
Screw material	stainless steel		

Application

Traditional low pressure oil level management system

High pressure oil level management system

Oil Separator Series OS

Features

- Three different construction styles:
 - Hermetic
 - Top flange
 - Bottom flange with support bracket
- Stainless steel needle valve and floater
- Permanent magnet to catch iron particles out of the system
- Corrosion resistant epoxy powder painting
- ODF Copper fittings for easy soldering
- Temperature range TS: -40°C ... +65°C
- Max. working pressure PS: 31 bar (UL)
- CE marking according PED 97/23 EC

Capacity Data for other than Nominal Operating Conditions

Nominal capacities at +38°C condensing temperature (+38°C bubble point or +43°C dew point for R407C), +4°C evaporating temperature (saturated temperatures / dew point) and 1 K liquid subcooling at the inlet of the expansion valve.

Correction factor for other evaporating temperatures than nominal:

$$Q_n = Q_o \times K_t$$

Q_n : Nominal capacity

K_t : Correction factor for a pressure drop corresponding 1 K saturation temperature

Q_o : Required cooling capacity

Suction Accumulators, Ball Valves, Acid Test Kit

Suction Accumulators Series A

Features

- Hermetic design
- ODF Copper fittings for easy soldering
- Corrosion resistant epoxy powder painting
- Internal orifice with strainer for optimum oil return
- Temperature range TS: -45°C to +65°C
- Max. working pressure PS:
20.7 bar (-10°C to +65°C)
15.5 bar (-45°C to -10°C)
- CE marking for certain types according PED 97/23 EC
- HP marking for certain types according German pressurised vessels directive

Ball Valves Series BVE / BVS

new version

Features

- BVS version with schrader valve
- Feature mounting capability
- Hermetic design
- Max. operating pressure PS: 45 bar
- Compatible for high pressure Refrigerants as R 410A and CO₂ (sub-critical)
- Light weight design
- Virgin PTFE seat gaskets
- Bi-directional flow characteristics
- Valve cap retained by strap attached to main body
- Pressure relief port design
- UL approval and CE marking acc. PED 97/23 EC
- Applied Standards EN 12284, EN 378, EN12420, PED 97/23/EC, RoHS 2002/95/EC
- To protect valve from un-authorized use a special cap is available as accessory (see page 155)

Technical Data

Max. operating pressure PS	45 bar
Medium temperature TS	-40 ... 120°C (150°C short term)
Medium compatibility	HFC, HCFC, CO ₂ , Mineral, Synthetic and Polyol-Ester (POE) lubricants

Acid Test Kid Series AOK

Features

- Quick & easy test kit
- Universal acid test kit for use with all oils: Mineral, POE etc
- By changing the percentage of oil sample taken, the acid number of the oil can be accurately determined
- Phase separation of the chemicals in the kit provide a positive colour change regardless of the colour and condition of the oil

Cable Assemblies with Plug

ALCO offers cables with preconfigured plugs. This makes installation very easy and quick, only cable with crimped ends has to be connected.

The cable assemblies are available in various lengths:

Product Type			Cable length		
			1.5m	3.0m	6.0m
	ASC Solenoid Coils		ASC-N15 804 570	ASC-N30 804 571	ASC-N60 804 572
	ASC 24V for DC applications		DS2-N15 804 620		
	EX4 ... EX8 new loose wires		EXV-M15 804 663	EXV-M30 804 664	EXV-M60 804 665
	FSY Fan Speed Controls		FSF-N15 804 640	FSF-N30 804 641	FSF-N60 804 642
	FSP Power Module connection to FSE Control Module		FSE-N15 804 680	FSE-N30 804 681	FSE-N60 804 682
	FSP 2-Pin Plug connection to EC2, EC3 or third Party Controllers		FSP-L15 804 693	FSP-L30 804 694

	1 5/8" - 3 1/8" (42 - 54mm)		806 772

Conversion Table

Power

kW / h = Kcal / h : 860	Kcal / h = kW / h x 860
kW = US ton of refrigeration : 0,284	US ton of refrigeration = kW x 0,284
kW = BTU / h : 3413	BTU / h = kW x 3413

Temperature

°C = (°F - 32) : 1,8	°F = (°C x 1,8) + 32
----------------------	----------------------

Pressure

bar = PSI : 14,5	PSI = bar x 14.5
1 bar = 100 000 Pascal	100 Pascal = 1 mbar

Connections

All other PS3 type		6	-40 ... +70	27/32	Under LVD, excluded from PED		CE	
FD113...		6	Under LVD, excluded from PED				CE & UL	

LVD = Low Voltage Directive

Fan speed Controllers

Product	Fluid group	DN (mm)	TS (°C)	PS (bar)	Hazard category	Conformity assessment module	Marking
FSY-41...	II	6	-20 ... +70	27	under LVD, excluded from PED		CE
FSY-42...	II	6		32			CE
FSY-43...	II	6		43			CE

Transmitters

PT5-07M/T	II	6	-50 ... +80	27	SEP	-	CE
PT5-18M/T, PT5-30M/T	II	6	mobile applic.:	45	SEP	-	CE
PT5-50M/T	II	6	-25 ... +80	72	SEP	-	CE

Thermo® Expansion Valves and Electrical Control Valves

TI	II	max. 16	-45 ... +65	45	SEP	-	-
TX3	II	max. 16		45	SEP	-	-
TX6-H/M/N/S..	II	max. 22		31	SEP	-	-
TX6-Z..	II	max. 22		42	SEP	-	-
T-series	II	max. 28		31	SEP	-	-
L-series	II	max. 28		31	SEP	-	-
935-series	II	max. 28	-120 ... +65	31	SEP	-	-
ZZ-series	II	max. 28		31	SEP	-	-
EX2	II	max. 12	-40 ... +50	40	SEP	-	-
EX4/EX5/EX6	II	max. 22	-50 ... +100	45	SEP	-	-
EX7	II	35		45	I	A	CE
EX8	II	42		45	I	A	CE

Solenoid valves

110 RB 2...	II	6 ... 10	-40 ... +120	31	SEP	-	-
200 RB 3/4/6...	II	10 ... 16		31	SEP	-	-
240 RA 8/9/12...	II	16 ... 28		31	SEP	-	-
240 RA 16T9	II	28		31	SEP	-	-
240 RA 16T11	II	35		31	I	A	CE
240 RA 20T11/13/17...	II	35 ... 54		31	I	A	CE
540 RA 8/9/12/16...	II	16 ... 28		31	SEP	-	-
540 RA 20T11	II	35 ... 54	-40 ... +120	28	SEP	-	-
M36-078	II	28		35	SEP	-	-
M36-118	II	28		35	SEP	-	-

Regulators

ACP	II	6 ... 10	-40 ... +120	31	SEP	-	-
CPHE...	II	12 ... 28		28	SEP	-	-
PRE/PRC	II	16 ... 35	-30 ... +80	25	SEP	-	-

Ball valves

BVE/BVS...	II	≤ 28	-40 ... +120	45	SEP	-	-
BVE/BVS....	II	≥ 35		45	I	A	CE

Hazard Category: SEP = Sound Engineering Practice acc. to art. 3.3 of PED.
